ON SOME CANADIAN ROCKS CONTAINING SCAPOLITE,  
WITH A FEW NOTES ON SOME ROCKS ASSO-  
CIATED WITH THE APATITE DEPOSITS.

By FRANK D. ADAMS, of the Canadian Geological Survey, and  
ANDREW C. LAWSON, Ph. D., of the Canadian Geological Survey.

At the meeting of the British Association for the Advancement of Science, held in Montreal in the summer of 1884, a short paper entitled "On the Occurrence of the Norwegian 'Apatitbringer' in Canada, with a Few Notes on the Microscopic Characters of some Laurentian Amphibolites," was read before the Geological Section by Mr. Frank D. Adams. Only a short extract of some dozen lines was prepared for the Transactions, as it was proposed to continue the investigation of these rocks and especially to study their geological relations in the field. A thorough geological examination of the district from which these rocks were obtained has not, however, been found to be practicable, and in the following paper it is proposed to give a more detailed description of them, together with the results of the examination of a few others collected since that time.
