**Radigan's Patent Metallic Lath.**

THE object of this invention is to form circular corners on stud partitions, both outside and inside, when required, or only on the outside. This has hitherto been done by making the grounds with coopers' laths, which, owing to shrinkage, caused the plaster to crack—but curves of any required radius may be made with these Metallic Laths, and which will form a strong and firm ground in line with the wooden lathing for plastering on, and as shown in Cut A, the laths are keyed top and bottom, thus forming a double key. The attention of Architects and Plasterers is called to this invention. Give them a trial and be convinced. Send for circulars and price list.

JOHN RADIGAN,

68 Marv Street, HAMILTON, ONT.
