Connected with the building used for the Lectures, is an ice-house. In addition, such other requisites are possessed as are deemed adequate to render this department as effective as possible.

MUSEUM.

The Museum has been enriched by new preparations in Anatomy, both normal and morbid, since last session, having had the benefit of the services of a skilful anatomist employed for its special improvement. It contains a large number of Pathological specimens principally preserved under spirits in glass jars, also a selection of casts in wax and in *papier maché*, prepared at the manufactories of Guy & Thibert, in Paris. The numerous lesions of the eye are fully illustrated by a very extensive collection of models in wax which are as faithful representations of the original, as they are beautifully executed. The Pathological collection of bones is also numerous, and in fine preservation. The other examples of disease are highly interesting. The various objects are made use of by the different Professors to exemplify particular points in their lectures. Convinced of the great advantages of this accessory to a large medical school, further exertions are being used to increase its usefulness. A catalogue is kept of the different articles, 603 in number, and an Historical description has also been commenced with a view to future publication.

LIBRARY.

The Library now contain sover 2700 volumes, being by 300 volumes more full than last year. This large accumulation is made up of valuable monographs, elementary works, and hand books on the various departments of medical science, and a complete series of the best English periodicals. The greater number will be found to be books of standard reference. It is open to the student, without cost, upon the deposit of a small sum, which is refunded upon the return of the book.

PLATES.

The Lectures are illustrated by a varied and extensive assortment of instructive and well executed plates, both plain and colour-
