THE FARMER'S ADVOCATE.

Questions and Answers. Miscellaneous.

Keeping Cows in Stable Constantly. Please advise as to the following practice, which is carried out by quite a large number of farmers, viz .: That of putting cattle in stable at the close of autumn season and only letting them out when spring opens up and pasture is ready. In the meantime they have been fed and watered all winter through, tied up in their stalls, and only let out on an average once every ten days or two weeks, and then only for two or three hours each time, being as long as three weeks and a month without being untied. 1. What effect has it on a cow in calf?

2. Is it the cause of cows not cleaning promptly when delivered of their calves or putting out calf bed ? Does it have any effect on the cow's milk, and is diarrhea in calves due or caused by this stationery confinement of cows? Would you consider it a case for the attention of the Society for Prevention of Cruelty to Animals ? ENQUIRER.

Ans.-1 and 2. This system of stabling cows is not by any means best, for all animals require exercise in order that they may be maintained in the best possible health. They should have freedom in the open air, with opportunities or exercise, and often in the summer-time this is best provided at night, as heat and flies are more injurious than confinement in a cool stable. However, there are dairy farms where the owners find it more profitable to maintain the cows under close confinement. In time it may so affect the herd as to cause trouble at time of parturition. We cannot see that it would have any effect upon the quality of the cows' milk, neither would it cause diarrhea in calves, except that the calves might not be so strong physically when born, and thus more susceptible to digestive troubles. As before stated, it has been found expedient on some farms to keep the cows tied or in stalls almost constantly; it is not on the whole the best system, but we cannot see that it comes in any way under the jurisdiction of the Society for the Prevention of Cruelty to Animals.

Gossip.

A change in the advertisement of Geo. D. Fletcher regarding his Shorthorn cattle, Clydesdale horses and Yorkshire swine, appears in this issue. Turn to the advertisement and see if this stock interests you.

MILLIONS LOST

Millions of dollars have been lost in Canadian dairies and MILLIONS more sent out of Canada to foreign countries. Why ? Because the Standard Cream Separator was not made sooner. A

and Six Cows

will produce as much cream (butter-fat) in **12 months** as most other separators and six cows in 16 months, or the old method and six cows in 20 months.

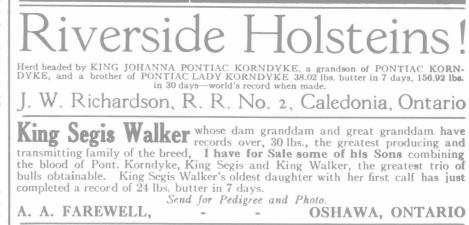

It is no longer necessary to buy a separator made in the United States or any other foreign country. The Standard Separator, "Made in Canada," takes second place to none.

Money invested in a Standard is as safe as the bank. It earns 25% to 50%, and being invested in a home product comes back to you in the form of better markets for your produce.

To everyone interested we say, try a Standard. Our catalogue (yours for the asking) gives complete separator information. Send a postal for one to-day.

offers ready for service, sons of Prince Aaggie Mechthilde from R.O.P. and R.O.M. sisters and dam of Duchess Witche Calamity 2nd, Canadian Champion two-year old for butter in R.O.P. 16714 Ibs. milk, S.D. Ibs. butter. Write: Walburn Rivers, R.R. No. 5, Ingersoll, Ont.

THE FAIRVIEW HOLSTEIN HERD offers Tready-for-service sons of Homestead Colantha prince-3 nearest doms average over twenty-nine pounds of butter a week; also daughters from one week to two week of the tready domains average over twenty-nine week to two years of L. Priced right. FRED ABBOTT, MOSSLEY, ONT., R.R. No. 1 HOLSTEINS AT CLOVERLEA.

Another visit by a representative of this paper to the well-arranged Cloverlea Dairy Farm of Griesbach Bros., of Collingwood, Ont., found the herd in nice condition and decidedly stronger, both in numbers and in heavy-producing breeding over that of a year ago. At the head of the herd this year is the grandly bred bull, Pontiac Norine Korndyke, a grandson of the renowned Pontiac Korndyke, and a son of the intensely-bred Sir Korndyke Boon, whose dam is a 32.17-lb. cow, with a butter-fat test of 4.86 per cent., and he has twelve 30-lb. sisters. On his dam's side, this young bull is also bred on 4-per cent. butter-fat lines, being a grandson of Lady Wayne Norine, butter 22.03, butter - fat 4.09, and the dam of Brookbank Butter Baron, the Canadian champion sire. Official back-ing all along the line is characteristic of the breeding of the entire female end of the herd, representing on their sire's side such proven sires of record-makers as Sir Admiral Ormsby, Duke Netherland Pistertje, Sir Mutual Butter Boy, Count Calamity Mercedes, Canary Mercedes Pietertje Hartog 3rd, etc. Among the young bul's for sale is one out of Pauline Gervin 3rd, a 43-lb.-per-day two-yeur-old daughter of Count Calamity Mercedes. This young bull is sired by a grandson of Count Hengerveld Fayne De Kol, out of Beauty of O. A. C., 10,690 Hes malk in 300 days. Another is out of a in 300 days. Another is out of a daughter of Canory Mercedes Priterta Hartog 3rd, and sired by Conary Pietertje Hartog 7th, whose dam bus a milk record of 116 lbs, in one day Other young hulls for sile are equally as well bred. Write Griesbach Bros. for prices and full particulars of breeding
