**JOSEPH F. RAINER, Proprietor.** Guelph, Dec. 14, 1872. (dw)

### DRESS and MANTLE MAKING

**The Fashionable West End.**

**To the Ladies:** We have during the past two years contemplated the establishment of a Dress-Making Department, in connection with our other branches. The difficulty of obtaining a suitable person to take charge, has, up to the present time, only prevented us from doing so.

We have now great pleasure in informing you that we have secured the services of Mrs. Morrison, of Toronto, a lady of first-class abilities, highly recommended to us, and we believe eminently qualified to give complete satisfaction in every respect. Mrs. Morrison has for the past ten years occupied the position of cutter and fitter in one of the leading Fashionable Dress-making Establishments in the City of Toronto.

Mrs. Morrison is also an experienced Mantle maker, and all orders entrusted to her will be executed in a style equal to anything that can be obtained in the largest cities.

Orders for these departments will be received on and after Monday next, the 17th of May.

**A. O. BUCHAM,** Fashionable West End Dress, Mantle and Millinery Establishment.

**Guelph Evening Mercury** TUESDAY EVENING, JUNE 24, 1873.

**Town and County News.**

**LECTURE.**—Mr. E. Barrett, G. W. L. of the I. O. G. T., is to deliver a lecture on Temperance in the Good Templars Hall on Monday evening next, 30th inst., to which all are cordially invited. No admission fee.

**THE LECTURE TO-NIGHT.**—We would remind our readers of the Rev. Prof. Bryce's lecture in the Town Hall this evening, on Manitoba—its physical features, social and religious aspects. The lecture promises to be an interesting one, and we hope to see it well attended.

**Y. M. C. A.—**The Bible Class in connection with the above Association, which formerly met on Monday evenings, will henceforth meet on every Tuesday at 7:30 p. m. The class is taught by Mr. D. McCrae, and all who can make it attend are cordially invited to attend. The lesson for this evening is a recapitulation of the life of Joseph.

**THE RAIN.**—The long-looked for rain has at last come. Last (Monday) evening it set in quietly, and during the night it rained heavily and almost incessantly. The parched earth eagerly drank in the blessed showers, and to-day vegetation looks green and much invigorated. The prospect now is that we may have a good deal more rain, but though we have some every day for a week it is all needed.

**DOMINION SALOON.**—We learn that Mr. Geo. Bookless has leased this saloon, lately occupied by Mr. D. Bunyan, and will open it in a few days. He intends to make it in all respects a first class saloon and restaurant. Being steady, attentive to his business and obliging, we have no doubt Mr. Bookless will meet with success in this his first venture on his own account.

**THE 10TH ROYALS.**—For some time past troubles have been brewing in the camp of the 10th Royals, and certain irregularities have at last assumed such a magnitude that it comes within our province to allude to them. It is freely reported that serious pecuniary difficulties exist in certain quarters and that certain monies have got into the wrong hands. On behalf of the citizens, who take a deep interest in the proficiency and success of our volunteer soldiery, it is to be hoped that these ugly rumors can be explained away. In the opinion of many, however, the new Minister of Militia, when appointed, cannot inaugurate his term of office in a more befitting manner than by at once instituting a court of inquiry into the state of affairs said to exist, which if correct demands a prompt punishment for the offenders. A compact is said to have been entered into by certain of the officers, the conditions of which reflect anything but credit on their honor and integrity. We trust that the existing difficulties will be at once arranged, and that the 10th Royals may continue to be an honor to our city and a credit to the country.—Toronto Sun.

A very handsome young fellow from Baltimore assumed a citizen on the street in Staunton, Vt., a few days ago, and was sentenced to the chain-gang in default of payment of his fine. While the gang was working near a girl's sepulchre, the girls caught sight of his handsome face, which so appealed to the sympathies of the tender-hearted creatures that they "chipped in" and paid his fine. He manifested his gratitude by getting beastly drunk.

West Toronto is becoming the scene of numerous and exciting occurrences. On Saturday last there was a suicide by a woman, a man accidentally shot by another, a lad accidentally shot by himself, a man drowned, and a man hurt by a runaway.

A virulent type of small-pox is prevalent at Clatham, Eng.; 39 women having been attacked.

The docks of Cardiff, Wales, constructed by the Marquis of Date at cost of £30,000 are reported to be on fire.

The discovery of extensive fields of gold at the head waters of the Big Laramie river, and its tributaries, in Wyoming, is reported.

Helmhold, of broken notoriety, is said to be shipping potatoes from Berlin to London.

Mrs. J. V. Noel, of Kingston, a writer on Canadian subjects of some repute, died on Saturday evening, after an illness of two or three weeks.

### THIS MORNING'S DESPATCHES

**More Fighting in Cuba.**

**Fire.**

**The Shah in Woolwich.**

**The Great Eastern.**

London, June 23.—General Sir Henry Rawlinson, President of the Royal Geographical Society, is seriously ill.

At noon on Saturday the Great Eastern was in latitude 53 degrees 35 minutes; longitude 31 degrees 42 minutes. Eight hundred and ninety nautical miles of cable had been paid out. Up to noon on Sunday, at which hour the steamship was in latitude 53 degrees 6 minutes; longitude, 35 degrees 52 minutes, one thousand and fifty-five miles of cable had been laid.

The Shah of Persia, accompanied by a number of distinguished persons, went to Woolwich on Saturday, and visited all places of interest in that town. In the evening he attended the opera.

Cambridge, Ohio, June 24.—A coal tar vat exploded yesterday afternoon in the foundry of C. P. Simons & Bros., and before the alarm could be given the building was in flames. The fire spread to the adjoining building, threatening at one time to destroy that portion of the town. At midnight, however, the fire was under control.

New York, June 24.—Havana special advices report heavy fighting in the Manzanillo district in which the insurgents were uniformly successful, and a number of Spanish soldiers killed. It is reported that minor engagements have occurred on both sides. The insurgent General Garcia is reported to have united the commands of Generals Diaz, Gopez and Pradoll, and with the formidable force thus formed is operating between Bayamo and Manzanillo. Ten prominent Cuban citizens have been banished from Manzanillo by a general order of expulsion. The Spanish inhabitants of Havana are a good deal excited and excited by the uncertain condition of affairs in the mother country.

**Fire in Malton.**

**TWO MEN BURNED TO DEATH.** (Special to the Mercury.)

Malton, June 23rd.—Acheson's Hotel and stables at Malton were destroyed by fire on Friday night. The loss sustained is about \$1,600; the insurance \$1,000. The property is owned by Mr. Acheson, and occupied by Mr. Peacock. The origin of the fire is unknown, but it is supposed to have been the work of an incendiary. Mr. Peacock and family barely escaped with their lives, only saving their night clothes. Two men were burnt to death, namely: Theo. Dawson, who was in the employ of a Mr. Wilson, timber contractor, Toronto; and the other person is supposed to be Mr. Crawford, from Lot No. 27, 4th Line West Chingunancy, County of Peel. This is the second time this property has been burned down, resulting in loss of life each time.

**The Cholera Cases in Nashville.**

The following is a copy of a letter sent on the 10th inst. by a prominent physician of Nashville, Tenn., to a brother practitioner in Louisville, and relates to the type of cholera existing in the former city:

"We have a malignant form of cholera morbus in our city, a species of cholera equally as violent and uncontrollable as that imported from Asia. The disease made its appearance without any previous warning, in the old locality known as the Wilson Spring neighbourhood, a hotbed for all epidemics that reach Nashville. As yet it is not epidemic. Our city is in a good condition to diffuse the malarial, but it is mainly confined to the southern portion. Violent vomiting is generally its commencement, soon followed by copious liquid evacuations. In the first cases that appeared the matter thrown up contained bile, as also the first and second evacuations, but it soon changes to a colorless rice-water discharge, and after two or three evacuations the patient collapses and is urged rapidly to dissolution. In what we call the collapse state it might be termed a congestive state. There is not shrunken skin, the general blueness, nor the extremely emaciated form of the cholera subject of 1866. I have not witnessed in the present form of cholera that cadaverous, that punched-up appearance of an Asiatic cholera corpse. In almost all of the fatal cases to the 7th inst., the exciting cause of the same was traceable to a hearty meal of this year's new vegetables. In a meeting we compared notes, and almost every case was traced back to imprudence in using vegetables. Hence I still hold out that we have a severe malignant form of cholera morbus in our midst. I will here state that, when the patient is reached in time, the disease yields to medical treatment, at least most of the cases terminate favorably when taken in time, and the sequel of the present form of cholera promises quicker reaction and fewer relapses. I am confident that the medical treatment of this year's case of cholera is the early breaking out of the cholera. I certainly looked for it this year after the dispersion of the masses from the Vienna exposition, but we have a very severe prelude here now. Our city is in a good condition to diffuse the malarial, but it is mainly confined to the southern portion. Violent vomiting is generally its commencement, soon followed by copious liquid evacuations. In the first cases that appeared the matter thrown up contained bile, as also the first and second evacuations, but it soon changes to a colorless rice-water discharge, and after two or three evacuations the patient collapses and is urged rapidly to dissolution. In what we call the collapse state it might be termed a congestive state. There is not shrunken skin, the general blueness, nor the extremely emaciated form of the cholera subject of 1866. I have not witnessed in the present form of cholera that cadaverous, that punched-up appearance of an Asiatic cholera corpse. In a meeting we compared notes, and almost every case was traced back to imprudence in using vegetables. Hence I still hold out that we have a severe malignant form of cholera morbus in our midst. I will here state that, when the patient is reached in time, the disease yields to medical treatment, at least most of the cases terminate favorably when taken in time, and the sequel of the present form of cholera promises quicker reaction and fewer relapses. I am confident that the medical treatment of this year's case of cholera is the early breaking out of the cholera. I certainly looked for it this year after the dispersion of the masses from the Vienna exposition, but we have a very severe prelude here now. Our city is in a good condition to diffuse the malarial, but it is mainly confined to the southern portion. Violent vomiting is generally its commencement, soon followed by copious liquid evacuations. In the first cases that appeared the matter thrown up contained bile, as also the first and second evacuations, but it soon changes to a colorless rice-water discharge, and after two or three evacuations the patient collapses and is urged rapidly to dissolution. In what we call the collapse state it might be termed a congestive state. There is not shrunken skin, the general blueness, nor the extremely emaciated form of the cholera subject of 1866. I have not witnessed in the present form of cholera that cadaverous, that punched-up appearance of an Asiatic cholera corpse. In almost all of the fatal cases to the 7th inst., the exciting cause of the same was traceable to a hearty meal of this year's new vegetables. In a meeting we compared notes, and almost every case was traced back to imprudence in using vegetables. Hence I still hold out that we have a severe malignant form of cholera morbus in our midst. I will here state that, when the patient is reached in time, the disease yields to medical treatment, at least most of the cases terminate favorably when taken in time, and the sequel of the present form of cholera promises quicker reaction and fewer relapses.
