

# The big problem of the "little peach"

**L**AST year the Niagara District lost many thousand bearing peach trees because of "Little Peach." Next year, with more inspectors thousands more will be destroyed.

That is a pretty serious matter. Peaches are going to be scarce and high for years to come. Far-sighted fruit growers see clearly that now is the time to plant peach trees—healthy trees. And they know that "Brown's trees are good trees" They know we use no pits from canneries, but import every one of them from Tennessee, where both "little peach" and "yellows" are unknown. They know, too, that we see to it that all buds used are taken from absolutely healthy and vigorous young trees

If there is no "Brown man" near by, write your name and address on this ad., mail it to us and we will send you prices.
