- 4820—*Pyropyga decipiens* Harr. Not rare; on beech and other foliage. June.
- 4911—*Podabrus corneus* Lec. One specimen; no record.
- 5177—*Clerus nigriventris* Lec. Quite abundant on pine brush. July and August.
- 5229—*Laricobius Erichsoni* Rosen. Taken on pine in May; quite common. This is the *L. rubidus* of the Toronto list and of Canadian collections.
- 5243—*Ptinus bimaculatus* Melsh. Three years ago I found one specimen crawling around in a cork-lined box used for duplicates. As I could not discover that my duplicates were infested, I did not overhaul the box. The following summer, June, 1887, I found two or three specimens of this interesting beetle in the same box. Since then I have kept it as a breeding place for this species, and in May, 1888, found several more specimens therein. I have no recollection of having ever placed in the box anything but Canadian beetles, and thus introduced it from abroad. The beetles submitted as food for the larvæ bear evidences of having been used as designed. Packard says that the commoner species, *Ptinus fur* Linn., is known to attack collections of insects.

- 5254—*Ernobius luteipennis* Lec. Both rare on pine. June.
