

Canadian Experience

Videotex, Teletext
& closed-user
systems for...

Banking,
Cable,
Broadcast,
Retail,
Training,
Travel,
Education,
Business . . .

THE CANADIAN CONNECTION

Telidon, the technology which formed the basis of the North American videotex standard, was invented in Canada in 1978 and Canadian manufacturers and system operations have had more experience with NAPLPS technology than anyone else, anywhere. Canadian expertise can help you develop your videotex strategy, plan your system and services, and even create and package the information content you require.
