## TELIDON AS AN ARTIST'S CANVAS

And what of Telidon graphics? Full colour creations using a choice of thousands of colours and shades elevate computer graphics to a new art form. Not only are they easy to create but they are inexpensive to execute, store and transmit. Gone are the days of primitive "staircase" graphics. Graphic creations can range from strong, powerful images to subtle shadings and nuances. Even blinking, high-lighting and sophisticated animations are possible, increasing the inherent capability of an already powerful communications medium.

To create information on Telidon – NAPLPS videotex systems, an information provider terminal is the only equipment needed. Computer-based, it makes the generation of high-quality text and graphic information simple to learn and easy to execute. Telidon page-creation systems can range from highly sophisticated dedicated machines, to simple personal computers with appropriate software and hardware.

Canadian companies are in the forefront of NAPLPS hardware and software developments, providing state-of-the-art dedicated terminals or packages for adapting personal computers for NAPLPS capability.
