skin that's clear, soft and white. If you could only have this more beautiful skin exposed to view instead of the horrid old skin you now behold in your mirror! You can—and by a very simple, harmless process which you can use yourself. Get an ounce of common mercolized wax at your druggist's, and this evening spread a thin coating of it over your face. Tomorrow morning wash it off with warm water. Small powder-like particles of the lifeless togskin will come off with the wax. Repeat this daily until all the worn-out scarf skin has been absorbed. Then you'll have a lovelier, healthler-looking complexion than you now think possible. Chaps, pimples, spots, freckles or other surface disfigurements are of course removed with the skin fitself.

Service of a year in the Ypres salient stands to the credit of Lieut. Gray. He enlisted here with the 18th Battalion and went overseas with the famous fighting unit. After promotion to non-coms, rank in the 18th he was offered, and accepted, a commission in the imperial service, and then volunteered for the "tanks" service. That vas seven months ago. He is still anding a "boat."

The letter to his mother follows:

Somewhere in France, Dec. 30, 1917. LIEUT. GRAY. Dear Mother,-I know it is ages since I wrote to you, but conditions have not been of the best. And, well, I have been over the wall twice since I wrote last. Of course nothing can be said about such things now, but when I come home I shall tell you the story of a roll of friction tape,

Since the coming of the Vocalion, scientist and musicians are in accord. Both see the Aeolian Vocalion as an enormous advance over the older-type phonographs. And these are the refinements that dictated that judgment. Seek them in your new phonograph.

Unusual Beauty of Design A rare simplicity, almost classic, distin-

guishes the Aeolian-Vocalion. The resulting beauty is at once so dignified and delightful, so charmingly correct, as to bring to mind Keats' haunting lines on a Grecian Urn. The Vocalions with "period" characteristics are not only perfect phonographs, but are notably fine pieces of furniture.

Throat-like Tone Control

Hold your hand over your mouth while speaking. The result is an indistinct muffled noise with no character or detail; not a soft moduClosing the shutters of an ordinary phonograph for pianissimo effects is like this. All of the artist's delicate detail and niceties, the overtones of instruments are destroyed.

Now, place your hand to your throat. Feel the vocal cords as you increase or diminish the volume of sound. Note that you exercise this control at the soundsource. Thus is all detail retained.

On exactly this human principle does the Graduola operate. Its tone control is effected before the sound is amplified. Of all phonographs the Vocalion is, therefore, the only one that allows modification of sound volume while retaining all the sound

Permits Personal Interpretation

In the firelight, perhaps, or in the merry gathering, or in the stillness of the night, a thought comes that will not be expressed in words. Then is the glorious satisfaction of the Graduola keenly felt. For, with the Vocalion, the artistsoul of every man can find expression.

Adding color to the tones at will with every change of mood or fancy shading, slurring, varying the effect as does the musician in succeeding performances, you find a strangely satisfying and lasting fascina-

tion. You really play the record, instead of standing idly by as it plays itself. This privilege of inter-

pretation is possible in no other phonograph. It is the supreme refine-

ment that perfects the phonograph and makes the Vocalion a real musical instrument, instead of simply a talking machine.
