The Transcript

Published every Thursday morning from The Transcript Building, Main Street, Glencoe, Ontario. Subscription—In Canada, \$2.00 per year; in the United States and other foreign countries, \$2.50 per year.

Advertising—The Transcript has a large and constantly growing circulation. A limited amount of advertising will be accepted, at moderate rates. Prices on application.

Job Printing—The Jobbing Department has superior equipment for turning out promptly books, pamphlets, circulars, posters, blank forms, programs, cards, envelopes, office and wedding stationery, etc.

A. E. Sutherland, Publisher.

THURSDAY, JUNE 2, 1921

The Pennsylvania railroad has recently installed at Baltimore four grain-car dumping machines. The grain-car is run on to the machine, end and side supports are automatically placed, the removable grain door is pushed in, and the car is then tipped, first sideways 30 degrees, then endwise to an angle of 45 degrees; the endwise tipping is then reversed, so that the grain is completely discharged from the car. The time occupied in emptying the car, including placing and removing, is seven minutes. Each loader replaces the labour of 16 men, and will more quickly release the cars for service.

People generally haven't much use for the man who is known as "jack of all trades." Half learning a dozen things never gets anyone very far. Such a worker is very fortunate if he gets a fair living from his smattering of knowledge. But the ability to do one thing better than the average workman brings with it a competence and a certain distinction, and not infrequently wealth. More and more does the world demand the thorough mastery of some one line. Know all there is to know about some one thing, and there is a place waiting for you. Learn to concentrate in spite of what may seem to be insurmountable obstacles. Success will be inevitable.—Ex.

In the summer time when the thunder caps appear in the sky and the storm sweeps down on the farm, the farmer thinks less of his safety than he does of his live stock.

When the stock is in the field

during the storm it may happen that the animals drift against the wire fence, which may be heavily charged with electricity, and are shocked to death.

The ordinary fence built on wooden posts should be grounded every sixth post by means of a wire six or eight feet long twisted around all the line wires of the fence and then secured in a hole in the ground. The hole should be dug deep enough so that the wire comes in contact with moist earth. A fence so grounded offers no danger to live stock during the thunderstorm.

The wire fence built on galvanized steel fence posts is already grounded at every post and no thunderstorm with its discharge of lightning can injure the cattle enclosed by such a fence.

Horse Travel Days

The remark of the man who said he was glad that he had enjoyed his youth in the days of horse travel and serenity, gives food for thought. That time is not so far distant—thirty years at most. And what pleasant days they were, with less of the strain of these strenuous times. Journeying to and from the country places was slow, but much more enjoyable than now with fast automobiles to whirl one over the rural highways. The Pickwickian mode of travel was still with us in the nineties. And how much more quiet the country then was, for the city lures were not then so common and near as to draw the good folk from their work day in and day out. The man of today who lived in the time of horse travel was safer on the streets, and as a boy he would play where the youth of 1921 dare not, or if he does it is at the risk of his life; for the ever-present motor car does not permit of youths engaging in cricket or baseball on the city streets as was done thirty years ago. When horse travel prevailed, men had more time for serious thought on religious, educational, political and civic questions. Life was not then so swift, and the hours were given less to worldly things, especially on the Sabbath. Decidedly the man who lived the beginning of his life in those serene days is to be envied, for the generation that has arisen in the twentieth century is not aware of the joys of having lived through years that brought one nearer to nature.

Law Regarding Roads

A digest of the good roads legislation has been prepared by the Department of Highways. The various classes of roads in Ontario, with respect to provincial aid, are described as follows:

1. Township Roads: Under the control of township council, to which the province contributes twenty per cent. of cash expenditure, and average of 100 miles for each township. If the township appoints a road superintendent, the Province pays 40 per cent. of his salary.

2. County Roads: Under the control of the County Council, an average of 250 miles for each county.

(a) County roads generally receive a Provincial subsidy of forty per cent. for construction and maintenance.

(b) Provincial county roads receive a Provincial subsidy of sixty per cent. for construction and maintenance.

(c) County suburban roads are constructed and maintained in the proportions of forty per cent. by the Province, thirty per cent. by the city, and thirty per cent. by the county; and are designated by and under the management of a special commission representing the city and county. When a Provincial county road is included in a county suburban system, the Province contributes sixty per cent., the city twenty per cent., and the county twenty per cent.

3. Provincial highways are designated by and under the management of the Department of Public Highways and comprise about 1,800 miles of the most important roads in the Province.

(a) On Provincial highways generally, the Province assumes 80 per cent. of the cost, and levies 20 per cent. on the county in which the work is situated.

(b) Provincial suburban highways adjacent to the cities are designated by the Department, and the city is required to contribute twenty per cent. of the expenditure.

Care of Municipal Property

In our towns and cities one cannot go far without observing conditions of neglect and carelessness due entirely to the lack of interest of the people themselves.

Unfortunately, the average citizen feels that once he has paid his taxes he has fulfilled his duty, and the city can do the rest. He overlooks the fact that the city is but an aggregation of units, of which he is one; that any improvements or maintenance charges must be paid for by these units, and he must bear his share.

It is a well-known axiom that a careless employer is reflected in a careless employee, which largely accounts for the fact that in altogether too many cases the cost of municipal public works is largely in excess of the cost of such works when privately carried out.

Many instances might be cited of losses due either willful damage or carelessness by the people themselves. In an eastern city during the past month a sewer became blocked by the depositing of material which could not be carried away. Many cellars were flooded and a cost of \$30,000 entailed. These losses are reflected in the tax rate, and just so long as so much of the revenue must be utilized to replace or repair the effects of neglect or disregard of public property, just so long will the tax rate continue to increase.

NORTH EKFRID

Rev. Mr. Moore of Strathroy gave an excellent discourse Sunday afternoon. His text was Ephesians 4:15—"Which is the Head, even Christ."

Mr. and Mrs. Fred Perry and family of Windsor returned home Sunday.

Mrs. Grier of Strathroy is making a two weeks' visit with Mrs. Will Pierce.

Mr. and Mrs. Bert Condie of Watford spent Sunday in this vicinity.

Mrs. Graham has taken an agency for tooth paste and face cream, also victrola records.

Mr. and Mrs. Leonard Carroll of Mount Brydges called on Mr. and Mrs. Joe Klemm last Sunday.

A number from this vicinity attended the anniversary services at Sutherland's Sunday.

Born to Mr. and Mrs. Allen Perry of Windsor, a son.

Mrs. Annie Hardy is the guest of her sister, Mrs. Joe Klemm.

Wm. Nicholls, sr., is seriously ill. A baseball game played here Saturday between Springfield and North Ekfrid resulted in a score of 25-6 in favor of Springfield. Come again, Springfield.

A basketball game was played here Saturday evening. Mrs. Gordon Roemmel and Miss Lizzie Pierce were captains and the game resulted in favor of Mrs. Roemmel.

Paring a corn is both risky and ineffective. It is much better to use Holloway's Corn Remover and eradicate them entirely.

Wedding cake boxes at The Transcript office.

COWS IN HOT WEATHER

Shade and an Abundance of Water Are Necessary.

Trees in the Pasture a Boon—Some Cows Drink 20 Gallons of Water a Day at High Milk Flow—Fly Remedies—Lice on Hogs.

(Contributed by Ontario Department of Agriculture, Toronto.)

During the extremely hot weather, cows and calves frequently suffer, sometimes needlessly, from three things—effects of high temperature, lack of water, and from torment by flies.

A great mistake was made in the older parts of Ontario when practically all the trees were cut down, thus leaving no shade for cattle and other live stock. This is being remedied to some extent by the planting of trees along roadsides, lanes, and line fences where the trees will not interfere with the crops. But it takes a long time for trees to grow into a size which will provide much shade.

When the late Prof. Brown was in charge of the O. A. College farm and live stock, he planted small groves of trees on various parts of the College farm, and the result was that the herd lying in the shade among these trees on a hot day. These groves make the fields where located rather awkward to work, but the cattle certainly enjoy themselves among the trees. On a live stock and dairy farm, while it may not be advisable to plant trees in the middle of a field, it certainly will pay to have them in as many places as possible, where they do not interfere with the working of the land. They, of course, must be protected when young, from injury by the stock, but this can be done without too much expense.

In the meantime, on dairy farms where no shade is available in the regular pasture field, sometimes a wood-lot can be utilized for the stock during the heat of the day, though they may damage the young trees to some extent. Another plan is to keep the cattle in a darkened stable for part of the day. This means a good deal of extra labor cleaning the stable, and keeping the cows clean, and under present labor conditions is not so practical as on many farms. However, where there is the necessary labor available and particularly where cows are receiving soiling or silage feed to supplement the pasture, the feeding in the stable may well take place during the day, and the cows be kept inside while it is very hot. This plan also reduces worry from flies, when the windows are covered to make the stable dark.

Cows frequently suffer from lack of sufficient water. As a boy, the writer remembers driving cattle to "Big Creek" in Brant County during dry spells. The cows were nearly famished when they reached the "Creek" and would drink until they looked like bursting. But, by the time they reached home, after walking for a mile-and-a-half over a dusty road, the cattle were nearly as thirsty as ever.

The only safe source of a sure water supply is a deep well, driven or bored, and having the water pumped by windmill or other sources of power, with a storage tank for emergencies. There is no part of Ontario in which an abundance of water cannot be obtained, if we go deep enough to tap the hidden sources of supply. In some districts, more particularly in the natural gas regions, the water may be salt or sulphur, in which cases, large tanks or cisterns for storing rainwater may be necessary, but this is unusual.

No matter how it is obtained, the owner of dairy stock, more especially of cows, must apply a large amount of water, else the stock will suffer, which means lessened milk supply, and small cheques from the creamery, cheesery, condenser, or city dealer. Milk consists of about 87 1/2 per cent. water, and this water must come from the drink and feed of the cow. A cow giving 100 lbs. (10 gallons) of milk daily, will drink over 200 lbs. (20 gallons) of water in a day. Cows giving less milk will drink in proportion. Give the cows plenty of water. Young cattle, calves, and hogs, also need plenty of clean water in hot weather.

There are several good fly remedies on the market. Write there no time to make one, the purchase of a patent fly-killer or repellent, is advisable. These are usually applied daily, or twice a day with a small hand sprayer. The expense is not great and the freedom from worry by both cow and milker is worth the money.

A home-made remedy may consist of one-half gallon fish oil, or any old grease, one-half pint coal oil, and four tablespoonfuls of crude carbolic acid, cresol, etc. Mix thoroughly. This will be sufficient for twenty-five cows and may be applied with a brush or cloth. If there is no rain it will keep the flies off for several days. Milkers must be careful not to get this on the hands, nor allow hairs to drop into the milk pail, as it will taint the milk. It is safer to apply after milking.—H. H. Dean, O. A. College, Guelph.

Lice Add to Cost of Pork Production. According to tests made by the United States Department of Agriculture at Beltsville, Md., lice add a cent a pound to the cost of pork production. Two lots of hogs of ten each as nearly equal as to the quality of the animals as possible were used in the tests. The two lots were managed and fed in the same way except that one lot was treated for the prevention of lice. In the other the lice were allowed to have their way. At the end of the fattening period it was found that the hogs infested with lice cost a cent a pound more to fatten than those which were not.

CAIRO

Dan Campbell of Detroit, formerly a resident of this vicinity, visited friends here during the week.

Mrs. Ila Hayward returned on Saturday after enjoying a visit with friends in Windsor and Walkerville. Alex. Ard of Owen Sound is visiting at the home of his daughter, Mrs. Fred Burr.

Miss Lilly Ard of Detroit is a visitor at the home of her sister, Mrs. Fred Burr.

C. F. Dalster of Detroit is a visitor at the home of his friend, W. F. Burr.

The 24th was celebrated here by a whirling game of baseball between a club chosen from among the young men and the married ones which resulted in a defeat for the boys. Among the married men were some experienced players such as W. A. Edwards, W. F. Burr, M. D. Smith, W. McKeown, R. Pringle, R. Rolston and L. Sullivan.

Mrs. Alex. H. Munroe is visiting friends in Windsor at present.

The entertainment under the auspices of the Willing Workers of the Presbyterian church on Thursday last was a grand success in every particular. The debate, which was a feature of the occasion, was ably argued by four of the young men selected, viz.: Eric Moorhouse and W. F. Burr, who took the affirmative side. "Resolved that there is more knowledge derived from education than from experience," Albert Rush and John Barron took the negative. The pros and cons were so ably discussed that the judges, Mrs. Roy Downie, Theresa Curran and Harvey Annett, were unable to render a decision in the short time allowed, and decided to call it a draw. Songs and instrumental music followed, and the instrumental duets by the Misses Myrtle and Edith Annett were heartily received, as were the numbers given by Paddy Lee with the accordion and R. Burr with his violin. B. W. Fansher occupied the chair and filled the position with credit to all concerned.

The Presbyterians were favored with an address by Rev. L. E. Gosling of Duart, who discoursed fervently and eloquently in regard to the fall of Peter and his restoration by a look from his Master. Mrs. Gosling rendered a solo, "Teach Me to Pray," in a beautiful manner. Thos. Walker of London visited at the home of Mr. and Mrs. W. H. McKeown on Tuesday.

Mr. and Mrs. E. Routley and children of Aberfeldy, accompanied by Mr. and Mrs. M. D. Smith of Aberfeldy, were in the afternoon at the home of Mr. and Mrs. D. M. Smith.

The Friend of All Sufferers.—Dr. Thomas' Electric Oil is a valuable remedy to all those who suffer pain. It holds out hope to everyone and realizes it by stilling suffering everywhere. It is a liniment that has the blessing of half a continent. It is on sale everywhere and can be found wherever enquired for.

Children Cry for Fletcher's

CASTORIA

Fletcher's Castoria is strictly a remedy for Infants and Children. Foods are specially prepared for babies. A baby's medicine is even more essential for Baby. Remedies primarily prepared for grown-ups are not interchangeable. It was the need of a remedy for the common ailments of Infants and Children that brought Castoria before the public after years of research, and no claim has been made for it that its use for over 30 years has not proven.

What is CASTORIA?

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is pleasant. It contains neither Opium, Morphine nor other narcotic substance. Its age is its guarantee. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic and Diarrhoea; allaying Feverishness arising therefrom, and by regulating the Stomach and Bowels, aids the assimilation of Food; giving healthy and natural sleep. The Children's Comfort—The Mother's Friend.

GENUINE CASTORIA ALWAYS
