

the nine joints of the tail (abdomen) very similar to those of *A. bungei*; the cercopods are with both sexes less slender at their base than in other species of fairy-shrimps and more in the shape of continuations of the two "lobes" of the last abdominal segment (see figs. 5b, c, 6d). The head of the male (fig. 5a, c) is

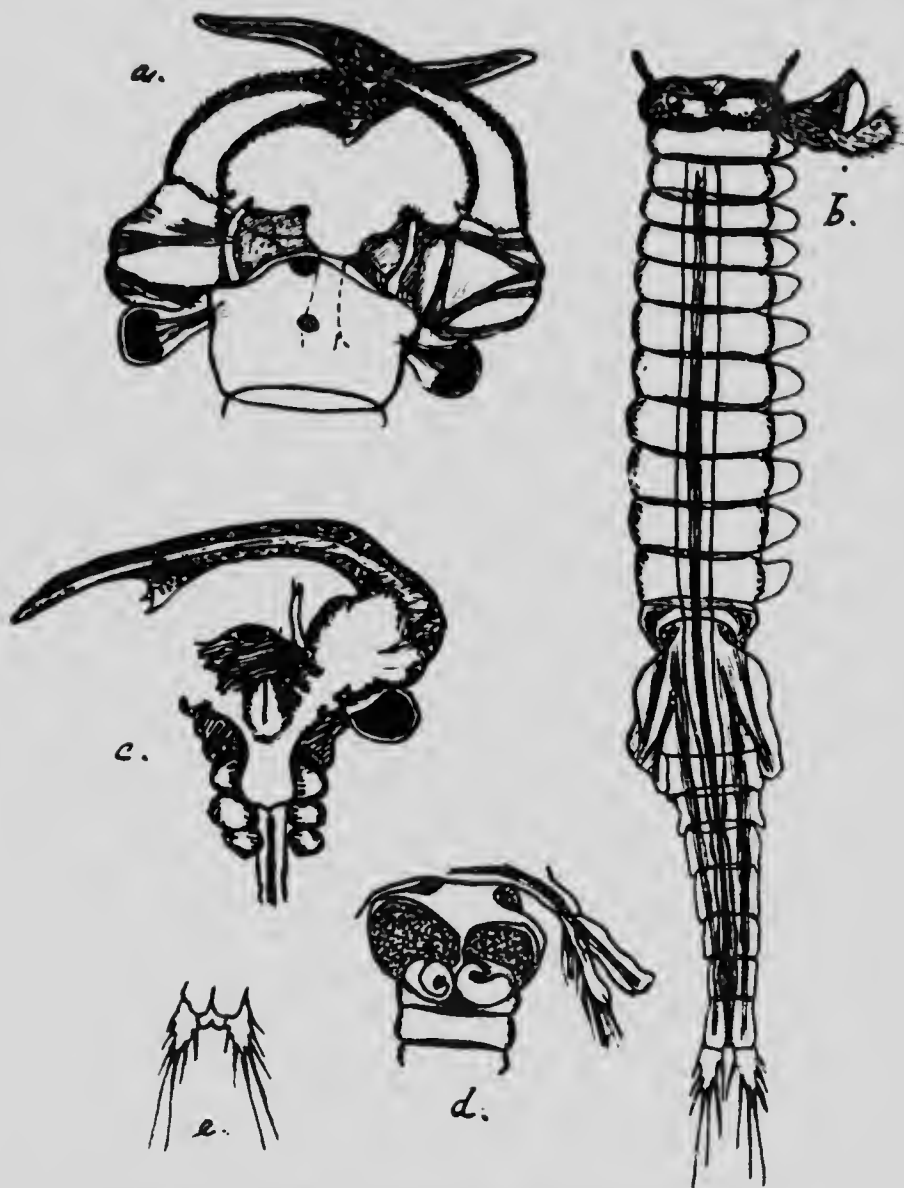

Fig. 5. *Artemiopsis stefanssoni* (Johansen). Male, 7-10 mm. long. Cotypes. Bernard harbour, N.W.T., October 6, 1915. About $\times 50$.

- a. Dorsal view of head. Chaspers crossed.
- b. " " body and abdomen. First pair of foliaceous legs and mandibles indicated.
- c. Ventral " head (part).
- d. " " genitalia. Last pair of foliaceous legs indicated.
- e. " " tip of tail (abdomen)
