9 & 10 City Market, W. B. Sylvester.

In connection with the Manchester Ship Canal, which was to be such a commercial boom, it has been discovered that it has become a dangerous nuisance, inasmuch as the drainage from a number of small towns on its route runs into it and causes it to be a source of alarm and peril.

A recent number of the Australasian Builders' and Contractors' News contains a letter received by Mr. Harry Wood, under Secretary for Mines and Agriculture in New South Wales, from Captain Rounding, in reference to the offer of the department of wood blocks for the pavement of the streets of the City of Vancouver, which, as is well known, are shortly to be laid in the most prominent parts of that city. It is believed in Australia that if these blocks are successfully adopted by Vancouver, they will soon be made use of by other cities both in the United States and Canada.
