The Ore Shipments Almost Up to the

The Ore Chute in the Evening Star Is Known to be Considerably Larger than the Management Thought Last Week-The Velvet,

4,000-ton mark looked for. The returns level in the No. 1 is also worthy of mention. As the work proceeds on this property its increasing value is clearly defect, and in the face there are stringers of

to the management last week. If the values hold out the Evening Star should ere long be one of the large shippers of ore. The management intends to make arrangements this week looking towards Republic, where he has been for a week the shipping the ore that is on hand and that may be taken out in the course of the development.

The news from the Vervet on Sophie mountain is of an encouraging character dumps, and this, with that which will be taken out in the course of development, has tapped the ledge, proving that it is strong and continuous for a distance of

The Ore Shipments.

The ore shipments from the camp for the past week make a very good showing. The Le Roi sent 1,920 ton to Northport, an increase of 96 tons over the previous week. The War Eagle is commencing to make up for the time lost by the accident and the delay caused by the changes in the machinery. One thousand seven hundred and thirty-nine tons were sent to the Trail smelter during the week.

The Centre Star sent 185 tons to Trail. All this ore came from the section of the mine specially worked in connection with the legal proceedings with the Iron Mask. No ore has been shipped from the main shaft as yet. The Iron Mask put out 74 tons. The improvements arranged for will enable this property to increase its shipments very shortly. The total shipments, 3,918 tons, are very well up to the average that was expected from the 1st of June, but is is evident that by the 1st of this amount will be considerably increased. The following are the shipments in detail for the week and year

Mine	Week, Tons.		
Le Roi	1,920		33,779
	1,739		16,496
Iron Mask	74	11	1,015
Evening Star			36
Deer Park			18
	185		333

51,677 3,918 Le Roi.-The figures given of the Le Roi's output for 75 days, or from March 1st to May 15th, make very interesting reading and afford some idea of the very large amount of work that is being acper day was 312 tons, worth \$5,500, splendid showing all things considered, but one that will easily be surpassed when the new plant and workings are

completed. In the mine itself development is being pushed very rapidly and more attention being given to this feature at the present time than to making a great output. Some heavy machine drills that have been ordered are expected tomorrow and work upon the new tunnel to the giant shaft will be resumed during the week. In the Black Bear tunnel the station for the new hoist is now being timbered up and word has been received from Denver that the soon be ready for shipment. Down in Trail creek a new dam is being put in so as to store up a large body of water. An electric pump will be installed at the dam to supply the compressor at the mine, when the present supply of water gives out. In the workings levels No. 5, 6, 7 and 8 are all leing extended west and ore is being shipped to the smelter from them all. The stope in the 700-foot level averages 40 feet in width, and on the 800-foot level the stope, which is about 30 feet wide, is now being open-

can be done here this stope will be wid-ened out to the full width of the vein. On the surface the buildings and plant are all being overhauled and the old ore bunkers, so well remembered by every visitor to the mine, are being torn down to make room for larger ones. Prepara tions are being made to put in coal bunk ers to hold about 300 tons and into which the cars can be directly emptied. The two 80-horse power boilers will go into use this week and coal will be used in

ed up, but as soon as some timbering

place of wood. Velvet .- J. L. Morrish, superintendent of the Velvet, was in town yesterday from Sophie mountain. He reports that he has encountered the vein in the main crosscut on the 160-foot level, at a distance of 132 feet from the shaft. This is the third point on this level that this ore body has been met, and it is certain now that it has a length of 275 feet on this level. Some of the ore was brought to town by Mr. Morrish, and it carries a high percentage in copper, and is certainly of a ship-ping grade. It is the typical high grade ore of the Sophie mountain camp, and is similar in apearance to that found in the Triumph of the Victory-Triumph group and in the Wallingford shaft. The work on the 260-foot level has been hampered somewhat by water, and the main cross cut on this level is in now for a distance of 32 feet. The trouble from surface water will soon be over, and then work can be done to more advantage on the 260-foot level. Word on the main adit is making excellent progress. It has been driven for a distance of 260 feet. It is expected that this adit will encounter the vein in 140 feet further. The machinery is working in a satisfactory manner, and at present 28 men are employed.

White Bear.-The water has all been pumped out of the property, and the shaft

s being cleared up preparatory to commencing the work of deepening it.

No. 1.—A strike was made in the No. 1 during the past week on the new 300-foot level, where the vein was encountered. ore is of good shipping grade. It will be necessary to do more developme work before the width of the vein at this THE LE ROI'S SPLENDID SHOWING level can be ascertained. In the 200-foot level the vein is now in from 10 to 12 feet of good shipping ore, and the values continue to steadily increase. In the main shaft the 400-foot level will soon be reached, when a Jeansville pump will be installed with a capacity of 400 gallons per minute, and sinking will be continued as rapidly as possible.

As will be seen from the details given Iron Horse.-Crosscutting of the below the shipments are well up to the vein found in the south crosscut is still in progress. This vein has been crosscut for a distance of 72 feet and is still in ore for the Le Roi mine detailed for 75 work- The vein is 100 feet wide on the surface, ing days show that from March 1st to and it is expected that the foot wall will May 15th of this year the daily output of be reached some time during the latter the mine was worth \$5,500 during that part of the week. The ore so far met is period. The figures given in another of a low grade. The south crosscut is in column showing the amount of work done on five mines owned by the British Amerina distance of 265 feet. The country rock ica corporation for the year ending May in the face of this crosscut is the hardest lst, under W. A. Carlyle's management, not including the Le Roi, 100t up a total of 3 1-8 miles. The strike at the 300-foot casing of the vein. It is usual just before.

The further explorations on the Evening Star only serve to show that the ore body is much more extensive than was known to the management last week. If the values hold out the Evening Star should ing engineer and superintendent of the Evening Star, arrived here yesterday from past. He stated last evening that he intended to make the necessary arrange ments to begin the shipment of ore this week. There is considerabel ore on the

dumps, and this, with that which will be ought to make a considerable tonnage in the next month or two. Deer Park.-The vein on the 300-foot level has been crosscut for a distance of 33

feet and no hanging wall has yet been met. The ore found in the last 15 feet is fine grained, and apparently carries more values than the ore met in the first 18 feet. No assays have yet been made, nor will there be until the ledge has been crosscut. Then the entire body will be sampled and assayed. The intention is to drift north and south along the ledge for the purpose of finding a pay ore chute. The manage men feels encouraged at the showing.

Iron Mask.—The Iron Mask sent 74 tons of ore to the smelter this week. The mine is in as good shape as it has been since work was first commenced upon it. The management has announced that it intends to largely increase its output, and to fur-ther this end the power plant, which is at present 100-horse power, is to be increased to 200-horse power. It is expected that shortly after the increased plant is installed the output will reach beween 200 and 300 tons per week.

Nickel Plate.-The new gallows fram old shaft is nearing completion and the new shaft has been raised from the 200-foot level 100 feet. This coming week sinking from the surface will be commenced and connection with the 200-foot level will be made this month. When the 200-foot level is reached sinking will be kept up until the 400-foot level is attained and a Jeansville duplex compound steam pump will be installed.

Sunset No. 2.—The work of timbering the shaft on vein No. 3 has been in progress during the week. A gallows frame and hoisting plant is being installed on complished in this property. During the this shaft, and during the progress of this period mentioned 23,420 net tons were work sinking has stopped. In the main shipped to the smelter at Northport, shaft sinking has progressed during the yielding 14,400 ounces of gold, 26,000 week at the rate of three feet per day. ounces of silver and 880,000 pounds of The main shaft has reached a depth of f silver and 880,000 pounds of the main shalt has teached.

The shipments making a total 430 feet, and the ledge in its bottom is \$412,000. The average shipment nine feet in width with well defined walls.

Mabel.-Work has been steadily all week on the Mabel, the Red nountain property that until last week sed down for two years. Development for the present is confined to crosscutting at the end of the lower tunnel, which is now in 250 feet.

Josie and Annie.-The main shaft on the Josie is now being sunk below the 300-foot level so as to open up the 400 and 500-foot levels. On the surface the ground is being prepared for the new gallows frame and electric hoists. All other work is stopped for the time being.

Mascot.-Tunnel No. 3 is in about 690 eet. The tunnel will be driven a distance of 700 feet, when crosscutting will commence. Tunnel No. 2 is in 695 feet, Winze No. 2 is down for a distance of 150 feet, and there is three feet of mixed ore

Gertrude.—The 10-foot sump in the main shaft of the Gertrude below the 200foot level has been completed and the men are busy timbering the shaft down some 40 feet. When this is completed drifting will be commenced.

Columbia-Kootenay.-In tunnels No. 3 5 and 6 of the Columbia-Kootenay drifting on the vein is in progress and connection is being made with the various levels so as to facilitate shipping in the

Great Western.-The Jeansville dupler steam pump ordered for the Great Western has not yet arrived and the mine is still closed down pending the arrival of the pumping apparatus and some other

Jumbo.—The big crosscut tunnel has been driven for a distance of 257 feet. It is expected that the ledge will be reached when this tunnel has been driven 190 feet further.

Coxey.-Work has been resumed upon the upper tunnel of the Coxey. Upon the surface men have been busy all week opening up the ground for exploration tary remedies,"-by a prominent physic-

Eureka.-Work has been recommenced on the properties of the Eureka Consolidated Mining company. These claims consist of the Eureka and Evening claims. Homestake.—The west drift is now in a distance of 260 feet. Work continues on

the crosscuts to the south. One crosscut is in 75 feet and the other 45 feet. Wallingford.—Good progress is being made with the development of this property. The tunnel is now in for a distan-

Showshoe.—The crosscut from the main nnel is in 85 feet. It is expected that the ledge will be met in about 25 feet. Big Four.-James Lawler, the owner of

this group, announces that he will resume work on these properties this week. Leiter.-The task of driving the longcrosscut tunnel continues, and it is now in for a distance of 185 feet. HAS A BRIGHT FUTURE.

T. E. Plewman Tells of What He Saw in

T. E. Plewman has just returned from a 10 days trip to the Boundary Creek country, and gives a very encouraging report. While there he visited the Humming Bird, Pathfinder, B. C., Oro Denoro, Winnipeg, Golden Crown, Knob Hill and Mother Lode, all of which are showing up well under development. The Winnipeg, Oro Denoro and Rathmullen are all engaged in surface work at present, pending the installation of machinery. The hoist ing and six-drill compressor plant of the Winnipeg is nearly completed and will be running in a few days, when work will be resumed in the drift at the 300-foot level, and a crosscut will also be run to tap the ledge of the property. The nipeg has the deepest dary Creek country and from 800 to 900 feet of drifting has been done at the various levels, exposing large bodies of ship-Men are now engaged in gradping ore. Men are now engaged in grading the C. P. R. switch to the Winnipeg, and as soon as the railway is running

shipments will commence.

The Brandon & Golden Crown is looking well, and sinking is now in progress from the 150-foot to the 200-foot level The Knob Hill crosscut tunnel is now in a distance of 560 feet, giving a vertical depth of over 200 feet. This tunnel depth of over 200 feet. This tunnel crosses the lead diagonally and is in ore

the Ben Hur, one of the group, and some nice copper ore is being found. Development work on the B. C. is confined to drifting on the various levels, and sinking will not be resumed till the installed. The B. C. ore dump is the prettiest I have ever seen, besides being or high grade, and lots of ore is being taken out in the course of development

The Oro Denoro has one of the largest nd finest surface showings in the country and looks as if it had the makings or a great mine. The Humming Bird small vein comparatively, clean ore of good shipping grade. Altogether the outlook for the whole country is full of promise and the Boundary Creek country has a great future before it.

Epworth League Club Social.

The young men of the Epworth League club tendered a social to the Epworth League and the club's friends last night at the club's rooms, at the Methodist at the club's rooms, at the Methodist church. The reading room was crowded with the largest attendance of any league social given during the past year. literary program consisted of a reading by Mr. Hughes, Scotch recitations by Mr. Playfair, a humorous reading by Mr. Dun-lop, a dissertation on Irish politics by Mr. Aiken, a paper by Joseph Lewis o the recent discovery, liquid air, and an account of the international peace conferaccount of the international peace countered by John Lewis. The speakers were all heartily applauded, and Mr. Playfair was encored. Games, a social time and refreshments followed the literary properheurity programments some club After refreshments some songs, written especially for the Epworth League club, but set to popular tunes, were sung. The ladies and visitors complimented the young men on their successful entertainment, and one of the visitors suggested that three cheers be Epworth League club, which was forthwith done with much enthusiasm and vigor. After singing "God Save a very pleasant social came
