

**Sherwood Spring**

Mrs. W. K. White, Caintown, was visitor on Friday last at Mrs. A. Eligh's.

Mr. and Mrs. Geo. Stewart were guests on Sunday at the latter's home at Riverside.

Mr. Charles Everetts and bride were recent visitors at the home of the former's sister, Mrs. Anson Latham.

Mr. Jas Eligh has gone to Yonge Mills to help Mr. Chas. Snyder with his spring sowing.

Mr. Leonard Hodge, Brockville, made a business trip through here one day last week.

Letters were received last week from Ptes. Allan Clow and Mort Hodge, and their friends are glad to know that they were well, at least at the time of writing, and had a very happy Easter.

**Catarrahal Deafness Cannot Be Cured**

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by a constitutional remedy. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed, deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever. Many cases of deafness are caused by Catarrh, which is inflamed condition of the mucous surfaces. Hall's Catarrh Cure acts thru the blood on the mucous surfaces of the system. We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars, free.

**We Are Not Philanthropists**

STRANGE, BUT TRUE

We do not solicit jobs that have no profit in them, but we do give a full dollar's worth for a dollar, plus real service. Service which includes co-operation of a kind that wins confidence in our methods.

Equipped with a modern Linotype and other facilities for producing high-class work, we ask you to consider our service when you have any kind of printing to be done.

The country printshop offers you personal contact with the work. Your ideas are better understood through personal interview than through correspondence. "Talking it over" is an important factor in the production of good printing.

**Fungus**

is In Fungus...  
Vegetable Specialist, Ontario Department of Agriculture, Toronto.)  
Garden Foes.  
Unfortunately the backyard vegetable grower has some difficulties to overcome. It will not be all pleasure and profit which he must look forward to because there are innumerable insects and fungus diseases which cause much worry and trouble and necessitate the use of extraordinary methods to prevent or control. Most of these troubles may be overcome by spraying the plants with remedies which can be secured from seed stores and other firms handling them.

The following is a list of the more common vegetables and the insects and plant diseases attacking them with remedies or preventives.

**ASPARAGUS.** Beetles, Blue, black or yellowish colored, about one-half inch long, which appear early in May and feed on the young shoots. Keep the bed closely cut in the spring or allow poultry to run through it. After cutting season is over, spray with arsenate of lead. Encourage the lady bird beetle which destroys many of these insects.

**Anthracnose or Pod Spots.** Brown or reddish spots on the foliage and pods. Found on low damp ground. Plant only seeds which have no signs of the disease. Pull up and burn diseased plants as they appear.

**CABBAGE, CAULIFLOWER, AND BRUSSELS SPROUTS.** Root Maggot. A small whitish colored maggot one-quarter of an inch long. Looks something like a grain of wheat, found just below the surface of the ground either close to or on the roots. They eat the roots, causing the plant to drop over. Apply a solution of corrosive sublimate one-half ounce dissolved in five gallons of water, at the rate of half a teaspoonful over each plant once a week for five weeks after they are set out, commencing three or four days after planting.

**Cut Worms and White Grubs.** Greyish white grubs which work at the surface of the soil cutting off the plants. They may be trapped by spreading a mixture of poison bran over the surface of the soil close to the plants. A pall of bran with sufficient paris green to highly color it, should be moistened with molasses until it crumbles readily in the hand. This moisture should be kept on the ground during the early part of the season.

**Worm.** A small greenish worm three-quarters of an inch long, which appears quite early in the season. Dust with pyrethrum or heliothrine powder when the plants have headed, or dust with a teaspoonful of paris green mixed with three tablespoonful of flour when young. A piece of burlap may be used for this purpose or an empty can with holes punched in the bottom.

**Aphis, also called louse.** Small greyish insects which multiply rapidly. They may appear at any time in the season. Spray forcibly with a solution made from steeping one pound of tobacco refuse in one gallon of water. This solution may be used on all plants on which Aphis are found.

**CELERY.** Blight. Black spots appear on the foliage followed by wilting of the plant and a soft root on the stock. Spray each week with a mixture of Bordeaux mixture covering the entire plant.

**CUCUMBER.** Striped Beetle. Black and yellow striped beetle which feeds ravenously on the tender leaves of the plant in the very early stage of growth. Dust leaves when wet with ashes or air-slaked lime.

**Squash Bug.** Dark brown beetle which sucks the juice from the plant. Hand pick and destroy. Found on the leaves.

**MELONS.** Cucumber insects usually attacks and may be destroyed as given above.

**ONION.** Onion Maggot. A white maggot similar to the cabbage root maggot. No effective means of control. Spread charcoal over the ground or try the corrosive sublimate solution as recommended above.

**Blight.** A violet color, patches appearing on the leaf of the onion. Some advise spraying with Bordeaux mixture from the time the onion plant is three inches high.

**POTATO.** Colorado Beetle or Potato Bug. Dust with paris green when the dew is still on the plant, or place a teaspoonful in a watering can of water and pour over the plant. If possible have the plant gusted with paris green before the bug appears.

**Scab.** Easily recognized by characteristic roughness of the skin. Immerse the uncut tuber just before planting in a solution of two fluid ounces of formalin with two gallons of water. Dry, cut, and plant.

**Blight.** Brown spots distributed over the leafy surface, usually found in July. If they are not prevented from growing, the whole plant will be destroyed. Spray once a week for four or five weeks with Bordeaux mixture from July 1st.

**RADISH.** Root Maggot. Use the same remedies as given for cabbage and onion maggot.

**TOMATO.** Tomato Worm or Horn Blower. A large worm which rapidly defoliates the plant. Hand pick and destroy.

**Blight.** Black spots appearing on the leaves which spread rapidly and cause the whole plant to die. Keep the plants growing vigorously.

**Caintown, Leeders.**

Mr. M. Heffernan spent last week with friends in Brockville.

Miss Loretta, and Veronica Leeder, spent the week-end at their home here.

Pte. Edmund Heffernan, 156 Batt., is at present at Braunschott Hospital, Eng. recovering nicely from a operation for appendicitis.

Farmers are busy seeding.

Some of our young people attended the dance in the I. O. O. F. hall, Mallorytown, on Friday evening.

Miss Winnie Ronan, was a visitor here on Sunday.

Mr. Leo Dundon, Brewer's Mills, was a Sunday guest at R. J. Leeder's.
