This is all very good in its own place, and we are very much pleased with it. But the country requires, and we certainly expect something better than the mere fact that the Ministry can command a majority! The people have been forms-certain measures which would produce tangible and immediate effects upon the actual progress and prosperity of the country, and they are willing to pay for judicious legislation on these practical measures. But this is compararively a poor country-it is a country where toil is, to the great bulk of the population, a stub born reality, and the novelties and nonsense which may be patronized in older and wealthier countries are scarcely tolerable in Canada. We amount to, perhaps, two hundred pounds per day for every day the Parliament is in Session, and when we look at the proceeds of the past twelve days, we candidly declare that we have received but small value for our twenty-four hundred and even a large proporation of our political economists have but dim conceptions of the real evil which they wish to remedy. A WONDERFUL MAN!

WE have to apologize to our readers for ne glecting to notice the fact that " Thomas C. Dixon, Esq., of London," the Ex-Mayor and genuine Omega of Martyrology, did, in his own proper person, honor Goderich with a visit during the week of the Assizes! The Martyr was pointed out to us by a friend in the Court, and we do acknowledge that we felt a slight sympathetic shiver as if somebody had applied a we thought of the sufferings of Huss, and Jerome of Prague, and John Oldcastle-and the whole ponderous volume of Fox the Martyrologist became visible at a glance. Mr. Dixon is withal, rather a venerable-looking man. His head is considerably above the average size—the animal region of the brain, especially Combative ness, Destructiveness and Secretiveness are large-the perceptive faculties are well developed-Conscientionsness very moderate - Firm-ness large, and Veneration and Wonder sufficiently large to make a good stump-preacher on the Millerite or some other of the extravagantly marvellous isms. THE HYDRO-ELECTRIC LIGHT. After a period of six years, employed in series of experiments, conducted upon the most philosophical principles, and continued with indefaugable perseverance, Mr. Henry M. Paine, of Worcester, has completed his "Magneto-Electric Decomposer"—an in-genious apparatus for evolving hydrogen and oxygen gases from water by the agency of electricity, generated by mechanical means. The gases thus obtained many be used for light, heat and motive power, and have been practically tested for the two first named lerful effect.

deful effect.

At his residence on Tuesday evening,
April 23, Mr. Paine exhibited the operation
of his invention to a number of gentlemen
in Boston and Worcester, some of whom have had considerable experience in the gas business, and others have taken great interest in plans and projects, having in view the production of artificial light at

sense as they please, because they talk at their own expense. But it is not so in Canada.—
Wm. Cayley and Louis Jeseph Papinean receive, each, four dollars a day from the public, and the public have a right to expect something better than sheer nonsense for such wages. Were the evil confined to the loss of their own time and services it might be tolerated, but when their diviselling is performed at a loss of two hundred pounds per day to the country, we certainly think that the people have a right to demand an immediate check to such extravagance. It is high time that mankind should escape from the expensive bondage of the absurd doctrines of will simply state that, as its name indicates, expensive bondage of the abourd doctrines of will simply state that, as its name indicates precedents and "parliamentary usages." and it evolves magneto-electricity by purely me chanical action. I'rom the above-mention ed box there ran first copper wires into the decomposing jer, which was about two feet in height and six or eight inches in diameter, bushel. Is 6d is to sold the said Court and put in Bail to the Action, or cause the claim of the eadd the said partly filled with water; in this jar, by the action of the electricity just spoken of pure hydrogen gas alone was formed from the water, whence it passed into two gasometers or reservoirs, about the size of a harrel each. The pole, at which oxygen gas is liberated, on this occasion passed into the ground, so that hydrogen only was evolved by the action of the machine. The process of carbonizing the hydrogen for illumination is exceedingly simple, and was open to view; it is very cheap, so much so that Mr. Payne says that the cost of carbonizing the gas be has burned in his house in three burners every evening for a week has not yet amounted to one cent. The Osween from Canadian Wheat, \$6 a 6.6 Prince and McNab would be prevented from process of carbonizing the hydrogen for picking the pockets of the people and impediag illumination is exceedingly simple, and was open to view; it is very cheap, so much so that Mr. Payne says that the cost of carbonizing the gas he has burned in his house in three burners every evening for a week has not yet amounted to one cent. The hydrogen is used for the general purposes of light and heat, and the oxygen can also be

secured in a second jar, and may be used with the hydrogen to produce the "calcium light" for light-houses.

Mr. Pain has also discovered a principle by which he can regulate the quantity of electricity to be discherged into the com-posing jar. A largo machine has recently been perfected by Mr. Pain, of sufficient power to supply three thousand burners with gas; it is set up in the Worcester Exchange, and only occupies a space of three feet square by six in height.
One cubit foot of water will make 2100
