Wales' Persimmon Taken From | they shall leave a space of four feet the Turf.

Officers for the Canadian Hunt Association.

Rules and Technical Terms of Football-Cycling Gossip-"Golf Arm."

### THE TURF.

CANADIAN HUNT ASSOCIATION. Toronto, Oct. 13 .- The bylaws and rules of the recently organized Canadjan Hunt Association have just made their appearance in pamphle The officers are: President, Colin Campbell, Montreal; secretary-treasurer, D. Laily McCarthy, 60 Victoria street, Toronto; executive com-unitee, Colin Campbell, George R. Hooper, M.F.H., Montreal Hunt Club; D. Lally McCarthy, R. O. McCulloch Country and Hunt Club of Toronto; Adam Beck, M.F.H., George C. Gibbons, Q.C., London Hunt and Coun-try Club; Dr. A. B. Osborne, M.F.H try Club; Dr. A. B. Osborne, M.F.H., W. Hendrie jun., Hamilton Hunt Club. PERSIMMON RETIRED FROM THE TURF.

The Prince of Wales' fine horse Persimmon will race no more. He has been struck out of his October engagements and sent to the Sandringham stud. As the hero of the "Prince's Derby" the goes down in turf history associated with a scene of patriotic and loyal enthusiasm, the like of which was never previously witnessed on an Engsh race course, and will never, in all addition to winning the coveted "Blue and ranking as the bes horse bred by his royal owner, shows a monetary record of a very substandial character as the racing career, the total value of the stakes he has won amounting to £34,-

The guideless pacing mare Marion Mills has earned over \$10,000 by her exhibitions this season, and her owner, G. W. Athearn has refused an offer of \$20,000 for her. WHEEL.

WOMEN'S RACE A FIZZLE. Bay City. Mich., Oct. 11.—Result of the six days' women's bicycle race: Miss Fiering, 196 miles 11 laps; Miss Kowalski, 196 miles 10 laps; Miss Raymond, 186 miles 16 laps; Miss Finley, 170 miles. The referee gave the race to Miss Kowalski on the ground that had ridden the entire distance while Miss Fiering was given several laps in order to induce her to go on the track Thursday night and continue the race. The contestants are looking for the manager, who has not paid them, and who is reported to have Local parties attached the box

MILE A MINUTE NOT POSSIBLE. A writer in a scientific publication recently argued against the possibility of the mile a minute bicyclist as fol-

at the rate of one mile in one minute is equal to .16 horse-power. The presof a wind moving at the rate of 60 miles per hour is variously given, but by no authority at less than 10.5 foot. Assuming that a rider and his wheel expose a surface of three square feet to wind resistance we have for the power required to overcome this resistance at the start. Truly, those Scotch are a the given speed 10.5 times 3 times .16, which equals 5.04, or a little over five horse-power. A man can ordinarily exert about .1 horse-power, but for a short time may exert five times as much, which would still leave him far short of the power required for pushing himself through the atmosphere at the rate of 60 miles an hour. Improvements may be introduced that will somewhat lessen friction, but frictional resistan present machine, when we made and in good order, is insignificant compared with wind resistance at high speed. Most of the contraption crease rather than lessen the friction resistance, while they do not pretend to affect either way the chief obstacle to high speed. If one could dispense the many thousands that will without the property of the many thousands that will without the property of the many thousands that will be thousands the way to be a popular sport to affect either way the chief obstacle to high speed. If one could dispense the chief obstacle to high speed to affect either way the chief obstacle to high speed. If one could dispense the chief obstacle to high speed to affect either way the chief obstacle to high speed. If one could dispense the chief obstacle to high speed to high spe Rir moving at the same rate as himself. limit to the speed possible to !

QUEER LAKE SALAWIK

Its Waters Grow Warm in Winter and Men Can Fish There With Clubs.

[Republique of Lewiston, Me.] The rich placers of Klondike are not the only curiosity of the country traversed by the Yukon. Not far from ersed by the Yukon. Not far from Dawson there is in Alaska a really extraordinary lake, which was named Salawik by its discoverer, the Rev. P. Tosi, a missionary among the savages. This lake, which is 90 miles long and about 15 miles wide, is perhaps the only one in all that extreme northern region which does not freeze over dur-

again at low tide. This sympathy with the sea does not extend to the point of making Salawik a salt lake; on the contrary, its waters are good to drink. But another of its peculiarities is that its temperature rises in winter and falls in summer. When all the water courses of the neighboring country are completely frozen over, Lake Salawik becomes so bathe in it. On the other hand, in the summer time the water is extremely

This peculiarity makes it in the winter time a Mecca of fishermen. The abundance of fish in the lake is so The two captains toss for choice of great that a person can almost catch them with the hand, and can kill large quantities with a club. Here for the miners is a source of food supply which certainly will contribute to diminish the winter, in that inhospitable region. In an hour a man can get enough fish to supply himself for a month, and of the very best quality, including salmon ranging from 20 to 50 pounds in in any way except by a punt between of Lake Salawik, one of those fashion-the goal posts and over the crossbar.

dear little cat, Chinchilla, poisoned July are all useful. The man with a fair knowledge of them will be a more useful citizen, a better "home man," a more advanced farmer, and will take away by the keeper for irreverently attempting to bury a bone on one of the graves of his fellow creatures." time to them he may get out of touch with the practical work of the farm.

AS AN ILLUSTRATION of the work done by the more advanced pupils I might mention what one was doing while I was at the college. This student, during the summer, cut alfalfa at different periods, and when I was there he was at work on anaysis to show at what stage of growth the fodder is most nutritious. Another interesting experiment is being carried on by one of the professors. Two sheep have been set aside, and every atom of feed given the animals, and all the excrement taken from them will be analyzed for the purpose of determining the feeding

value of different rations. THREE GOOD FEATURES. On the whole, the college and farm combine three excellent features: (1) It ing the winter. No communication has been discovered between it and the sea; nevertheless, at high water upon the coasts of the northern ocean, the level of the lake rises, and it falls are level of the lake rises, and it falls farm is carried on under the super-vision of Superintendent Rennie, who ulty of making the work of practical instruction interesting; and (3) the scientific training in the class-room is given by men who are enthusiastic their work, and who impart knowledge without which the next generawarm that it is really pleasant to tion of farmers will be badly handicapped.
But a lot of work is done at the

Model Farm aside from the mere training of students. The farm is a GREAT BIG EXPERIMENTAL STATION

tests are made of which the whole province gets the benefit, but no individual farmer could think of carrying on for himself. This department is under the control of Mr. Zavitz, and 50 acres are set aside for the work. On the 50 acres there are no less than 2,300 plots in which different varieties of grain, roots, etc., are tested. Take oats as an illustration of the nature of the extent of the experimental work. After a goal the ball is kicked.

It will not be astonishing it some eties and these experiments were confined as we may see, upon the shores eties and these experiments were continued for five years. Then 63 of the tinued for five years. Then 63 of the poorer varieties were dropped, and the work of testing the remaining 17 varieties continued. In 1891 a five-year test of 27 new varieties began. the same time seed from these several varieties were sent year after year to the members of the experimental unions, who are scattered over various ections of the province. The result is that every farmer in Ontario may, if

KNOW JUST WHAT VARIETY of oats is best suited for his locality. It is the same in other grains, etc. This year 65 varieties of mangels, 55 of carrots, 15 of sugar beets, 70 of Swede turnips, and 45 of Brantford,Ont.

The highest number most nil. It is clear that this de partment of the model farm, at all events, cannot be expected to pay. Then there is another department, and a very important one. The farm is every summer the objective point

> SCORES OF FARMERS' EX-CURSIONS.

In June last there cere 18,000 visitors to the grounds. To receive these, to show the guests about the place, and explain the work at the farm required the almost constant attendance of Messrs. Mills, Rennie and Zavitz, and about half the time of eight or nine other officers. From all this expenditure of the time of salaried officers the provinical treasury received no direct return, but who can estimate the educational value of the visit and instruction to the visitor? EVEN MORE IMPORTANT

is the work carried on in connection position in a sand bunker, should so wrench the muscles of his biceps and wrench the muscles of his biceps and shoulders as to produce that bound and lame condition which really is he was adored by his devoted and afflicted friend, Sir H. Seton Gordon, "golf arm."

was the most intelligent, devoted, gen-field work at 5:30 or 6.

The whole work, especially for the first and second year men, is intended and afflicted friend, Sir H. Seton Gordon, and the field work at 5:30 or 6.

The whole work, especially for the first and second year men, is intended and in the attendance.

Still more. Tuberculosi, is alarmingly prevaled to prepare the student for succession.

NO IMMEDIATE RETURN to the province. In this connection Mr. Harrison, who is in charge of the matter, says that the section about Ingersoll is freer from tuberculosis ment was that made by Mr. Harrison of the relative purity of milk taken from the cow by hand and that extracted by a milking machine. It was found that milk taken by hand only contained from 2 to 25 per cent of the number of bacteria germs that was found in milk taken from the cow by a machine. In other words, the mil drawn by hand, on the most favorable showing, only contained one-fourth the number of germs found in that taken by a machine. The variations, Mr Harrison thinks, is explained by the impossibility of keeping the rubber on the machine clean, owing to the fact that hot water cannot be used.

But, as said before, all these experiments and tests and all this teaching cost money, and from much of the expenditure there is no direct return.

It is, in fact, as from the college as it would be look for one from a high school. The one question is: Is the educational work carried on a sufficient return for the money spent upon it? answer to that question the college must stand or fall. For my own part after having seen a good deal of the work of the college, both at the college itself and in the farmers' insti-tutes, I should have no hesitation in returning an affirmative reply.

Out of the total number entered this year 100 are direct from the farm, and 12 or 15 have had experience in farm

growth of the college is shown these figures: Number of pupils Prepared by JAMES EPPS & CO., Ltd. tered in 1880, 62; in '85, 72; in '90, Homeopathic Chemists, London, 69; and in '97, 140.

"My experience as an attorney and counsel for men of large wealth, with an unusual clientage of that sort and of unusual number for the past twenty-five years, has been that eight-tenths of them lose their fortunes in their lifetime."

Men of wealth may make ABSOLUTELY SECURE a portion of their wealth by purchasing

ENDOWMENT POLICIES from THE ONTARIO MUTUAL LIFE, containing the Guaranteed Four Per Cent Annuity

and Life Option

with Dividends.

C. E. GERMAN. General Agent.
