

will ensure a favourable reception for the present book, which consists of five chapters, the first of which is entitled Introductory Remarks, and the others, The Parabola, Orthogonal Projection, The Ellipse, and

The Hyperbola, respectively. A collection of problems is appended, taken from the *Senate-House Riders*, recent college examination papers and other sources. The mechanical execution is beautiful.

BUSINESS.

If you know your subscription to have expired, renew it at once. \$1 per annum is the subscription price, and there is not a teacher in Canada who cannot afford to pay that sum for a good educational paper.

Notify THE MONTHLY at once of change of post office, always giving the name of old office as well as the new.

THE MONTHLY will not be discontinued to responsible subscribers until ordered to be stopped. Bills will be rendered from time to time, and prompt payment of the same will be expected.

Subscribers wishing to introduce THE MONTHLY to their friends can have specimen copies sent free from this office to any address.

Our readers will observe that special attention is given to examination papers in this Magazine; in many cases hints and answers are given, and for several papers solutions have been furnished to all the questions. We hope subscribers and others will show in a practical way their intelligent appreciation of the valuable work done by the editors of the different departments of THE MONTHLY.

We are grateful to the kind friends of THE

MONTHLY who have, from many different places, sent us letters of approval and appreciation. If golden words were current coin, our esteemed treasurer would be able to declare a handsome dividend, and while we are much encouraged by the frequent assurances that THE MONTHLY is fulfilling a noble mission, we would respectfully ask our good friends to forward their subscriptions, as, though one dollar is a small amount, yet when a large number are delinquent in this small sum at one time, the effect is somewhat hurtful to the position of an educational journal, depending chiefly, as THE MONTHLY does, upon the support of the profession.

The best educational journal is the teacher's best friend, and we ask you, gentle reader, to aid in securing new subscribers for this educational journal, and to help the editors in getting original contributions for its columns, thus making it more and more the best.

Bound copies of this Magazine in cloth may be had from William & Co., or from James Bain & Son, King Street, Toronto, for \$1.50 per copy.

GEOLOGY.

From the *London Literary World*, Oct. 22, 1886:—"Messrs. D. C. Heath & Co., of Boston, U.S.A., have begun the issue of a series of 'Monographs on Education,' consisting of short essays, prepared by specialists, choice in matter, practical in treatment, and of unquestionable value to teachers." If the first of the series, entitled 'Modern Petrography,' by George Huntington Williams, of Johns Hopkins University, is a specimen, the series will be fully entitled to the above description. There are few students of geology who would not be benefited, and none who would not be interested, in this very able and complete resume of recent research, by means of the microscope, into some of the most hidden secrets of that science. Not the least valuable part of the brochure is the excellent bibliography of the subject which is appended to it." Price 25 cents.

The same house publishes SHALER'S FIRST BOOK IN GEOLOGY. Price \$1.00.

From JOHN C. BRANNER, Prof. of Geology, Indiana University:—"With a view to urging the use of some elementary book on geology in the schools of this State, I have examined Professor Shaler's First Book in Geology. I cannot do better than recommend it."

Also *Hyatt's About Pebbles* (10 cents); *Crosby's Common Minerals and Rocks* (in paper, 40 cents; in cloth, 60 cents); and *Richard's First Lessons in Minerals* (10 cents).

PLEASE ENCLOSE ABOVE PRICES WHEN ORDERING.
