MULCAIR BROS., 87 St. Joseph Street, Montreal. Feb 9, 1-y

THE MIC-MAC REMEDY A SPECIFIC FOR SMALL-POX. ANOTHER VICTORY FOR MAJOR LANE. A HOPELESS CASE OF SMALL-POX CURED BY THE MIC-MAC REMEDY.

To MAJOR JNO. LANE, GREENFIELD, MASS. Dear Sir,—I telegraphed for a package of your Small-Pox Remedy on last Monday, which I received the following day. I would have instantly responded and forwarded the money, but thought I would await the result of its trial. I prepared the medicine myself so as to render everything secure; and I am proud to be able to state that it produced almost instantaneous relief. It was a malignant case of Small-Pox—in fact, there was no hope of recovery expressed on any side; but by the application of your famous Remedy it easily yielded. Enclosed I send you a five dollar bill. Please acknowledge.

Your truly, Rev. W. A. HENSENBERRY. Price \$5 per package. Sent to any part of the Dominion, post paid on receipt of price—a liberal discount to Clergymen, Physicians and Charitable institutions. B. E. McGALE, Dispensing Chemist, 301 St. Joseph Street.

WALKER, PALLASCIO & CO., DESIGNERS AND ENGRAVERS OF WOOD, Corner of CRAIG & BLEURY STS MONTREAL. (Entrance on Bleury st.) We beg to intimate that our facilities now exceed those of all the Wood Engravers of the Dominion combined, and in consequence of this, we are enabled to give superior work at lower charges than good engraving can be done for elsewhere. As we do not canvass, parties requiring Cuts will do well to obtain estimates from us. J. H. WALKER, PETRUS PALLASCIO. May 16, '77

OUR FACILITIES NOW EXCEED THOSE OF ALL THE WOOD ENGRAVERS OF THE DOMINION COMBINED, AND IN CONSEQUENCE OF THIS, WE ARE ENABLED TO GIVE SUPERIOR WORK AT LOWER CHARGES THAN GOOD ENGRAVING CAN BE DONE FOR ELSEWHERE.

ORDER YOUR CARDS AT GEO BISHOP & CO'S ENGRAVERS AND PRINTERS 169 ST JAMES ST

J. P. NUGENT, MERCHANT TAILOR AND CLOTHIER, 157 ST. JOSEPH STREET (Sign of the Red Ball) First-Class Fit and Workmanship Guaranteed. A large assortment of Gents' Hosiery constantly on hand.

FARMERS' COLUMN.

Trees.—Plant out a few trees every year, either for fruit or ornament. They add to the value of homesteads and pay continually in the comfort which they afford to all who live in and around them.

Butter Tubs.—Spruce butter tubs are the best; while hemlock makes a sweet tub; acids from the oak color the butter and injure its appearance; while ash gives the butter a strong flavor if kept long and increases the liability to mould; maple smells and cracks badly. Soak all tubs four to six days in brine before using.

Around the Farm.—The reports of widespread potato disease in the United Kingdom indicates that there will be an extra demand for foreign breadstuffs from that cause alone, and there can be little doubt, after a careful inquiry of the situation, that Great Britain will want all the wheat and corn we have to spare.

Effect of Wind on Evergreens.—There was never a better illustration of a point we are continually urging—that it is wind much more than frost that is so destructive to evergreens, and gives a tender character to many beautiful varieties—than the equinoctial storm of last spring afforded. The thermometer was only ten degrees below the freezing point, but the injury to evergreens was greater than at any time through the winter, when the thermometer was at zero—Gardener's Monthly.

Corn.—Have just examined a piece of evergreen sweet corn which was planted with seed selected by using only the upper ear where two grew on a stalk last year. The result is that nearly every stalk has two ears on; even five stalks with three ears on as there were with one but the two ears to the stalk were almost universal. Now, as we are so often reminded that we can improve our corn by selecting seed, let us take the more pains thus to improve this most noble American product.—Rural Home.

Sour Cider.—Alonzo Crafts has found a good use for sour cider. He had a sow with litter of nine pigs which the sow would not own, and towards which she was very violent, and but for their timely removal the little pigs would have been killed. He gave the sow two quarts of sour cider and in a few minutes she lay down, evidently "the worse for liquor." While in this condition the pigs were put to her to suck, and when she recovered from her "drunk" she owned the pigs all right, and now seems exceedingly fond of her progeny.

Watering in Cold Weather.—Cows giving milk need an abundance of water. The dry usually given affords little material for milk, and even with abundance of roots, unless water is placed within easy reach, cows will tend to fatten rather than to milk production. A great difficulty in cold weather is in having water so far from the yard that cows will suffer long before going to comfortable quarters to reach it. Whenever it is possible, a cistern should be constructed under the barn or under ground to hold water for stock.—Exchange.

Repairing the Mischief of Mice.—The writer had some seventeen apple trees badly damaged by being girdled by mice, many of them clear around the tree and for a space of six or eight inches from the base up, the past winter. Those trees are now in full leaf, and are apparently doing as well as any, among about 100 of the same age. We encircled the damaged places with common grafting wax, over which we wound cloth and then bound with twine. This was done as soon as we discovered the mischief and before the wood had seasoned.—Germantown Telegraph.

Feeding New-Born Calves.—When calves are taken from their dams immediately after being dropped, care should be taken to feed them at first with their mother's milk, which at the time of calving is peculiarly adapted to act as a gentle purgative, ridding the bowels of the calf of the meconium with which they are charged at birth. To induce the new-born calf to drink readily from a pail, a couple of fingers should be put into his mouth, and the muzzle then brought gently into the milk, which it will draw into the mouth while sucking the fingers.—Rural New Yorker.

Effect of Salt on Wheat.—In an interesting series of experiments recently made on the farm of the Royal Agricultural Society of England, the manurial value of salt was unmistakably indicated. An acre of wheat dressed with three hundred pounds of common salt yielded thirty-nine bushels of grain, with a proportionate amount of straw, while an adjoining acre left unmanured, produced only twenty-nine bushels per acre. The entire cost of crop is not yet stated, but this experiment shows that the additional ten bushels resulting from the salt were produced at a cost of thirty cents each.

To Break Up a Sitting Hen.—Our lady friends who generally have charge of the poultry department are sometimes worried and tortured by the obstinacy of hens that persist in sitting when they are not wanted to perform that duty. Many plans have been tried to prevent hens from sitting, such as tossing them in the air, or driving them from place to place; but the best way is to fasten a string to the hens leg, four or five feet in length, and tie the other end to a stake driven in the ground, close to the path where you are in the habit of passing frequently. Then scare her as often as you go that way. One day effects a cure.—American Stock Journal.

Horses and their Drivers.—Very many years ago I made up my mind that when there was a quarrel between a man and a horse, in nine cases out of ten the man was in the wrong. Continued observation has only served to confirm this belief. The radical error is to which drivers fall, is, that the horse knows perfectly what is wanted of him, and will not do it. Then the driver proceeds to show that he is the master and in the vast majority of cases, the horse is punished without the slightest idea why he is so treated. For a horse to understand instantly what his driver desires, there must exist a pleasant feeling between them. The horse must feel confidence in his driver and with one driver a horse will show himself fearless of locomotives, and with another he will dread them. One man will drive a horse fifteen miles with no more fatigue to the animal than another will produce in driving him ten. Nothing tends more to cruelty to animals than cowardice. The man who has a lurking fear of his beast, is the one who treats him the most harshly. The man who is afraid of no horse, is just the man who treats all kindly. He is perfectly aware that there is always danger in horses; but he also knows that this does not depend upon the horse; but mostly comes from extraneous source, the bad driving of others whom he meets on the road or accident of some sort. He has a kindly feeling towards his beast, as being a willing and useful servant and companion, ready to do his whole duty, and more than his duty. So there springs up a pleasant feeling on both sides, the horse is encouraged and cheerful, and gets through his work easily and well. Such a driver gets vastly more from his horses than does a cruel one. They come in fresh, they feed and sleep well, and begin the next day's work under favorable conditions. Age tells but slowly on them; at fifteen and sixteen years, such horses will show speed and endurance, and are still gay and free goers, with years of usefulness, before them, whereas the cruel man's horse is laid up long before this. There should be kindness simply from kind feeling, but it does not less certainly bring its material reward.

GREAT REDUCTION

IN THE PRICE OF STOVES AT E. & C. GURNEY & CO'S, 216, 218, and 220 ST. JAMES STREET.
