Export Contact: Mr. Bob Aubrey, V.P. Sales\Marketing

Biomira Incorporated, established in 1985, has made tremendous strides toward becoming a fully integrated biotechnology company, committed to the development of products for the diagnosis and treatment of cancer. The firm's years of research and development has led to a pivotal stage in the advancement of the company goal--a complete package of complementary products to assist the clinician in early diagnosis and effective treatment of patients with cancer.

Biomira Incorporated operates from a state-of-the-art 58,000 square foot research, development and manufacturing facility. In addition, Biomira operates a 1300 square foot Parenteral Manufacturing Facility with a class 100 filling and vialing area that conforms to the exacting specifications of international pharmaceutical standards.

Biomira Incorporated is actively pursuing international alliances to expedite the development and approval of their products. Opportunities exist for potential partners in all stages of development, however, clinical and marketing expertise is preferred. North America, Europe and Japan are the geographic regions of highest priority for the firm.
