"TO SOOTHE AND SMOOTH YOUR SKIN."

Cold Cream nightly and leave some on over night. This will give your skin the oil it needs so badly. Then every morning smooth on POND'S VANISHING Cream. It contains a wonderful day-time softening ingredient to prevent your skin from drying out again.

A. W. KENNEDY, Druggist.
MINARD'S LINIMENT FOR ACHE AND PAINS.

An Efficient Set That Anyone Can Build

(PART II.)

EDITED BY JOHN M. CLAYTON.

The inductance, or the tuning coil, is wound on the hard rubber form which was described yesterday. This form has a diameter of 2 1/4 inches and is 3 1/4 inches long. The secondary coil, which terminates on terminals "C" and "D" of the above diagram is first wound on the tube. This coil should consist of 75 turns of the number 26 D. S. C. wire. When mounting the coil, mount it in a vertical position. The end of the coil which is on top should connect to terminal "D" which, in turn, is connected to the grid condenser. Next, and before mounting the coil, of course, wind on a strip of paper about 3/4 inch wide. The paper should be wound around the bottom end of the coil. The end of the paper should be glued in place with a small amount of glue. Over this paper is wound the primary or antenna coil. It consists of 15 turns of the same size wire as was used in the secondary. The ends of the primary are connected to the terminals marked "A" and "B" in the diagram above. Note that the terminals "B" and "C" are strapped together and connected to the ground. The ROTARY plates of the variable condenser should be connected to this point also.

The set should be wired exactly according to the above diagram. Pay particular attention to A battery connections to sockets and rheostat. Also the "P" terminal of the audio transformer should be connected to the PLATE of the 1st tube socket and the "Q" terminal of the transformer to the GRID of the second socket.

With UV-201-A tubes (which we strongly recommend) the detector B battery should be 2 1/2 to 30 volts and the amplifier from 45 to 60 volts.

The "untuned" primary method is perfectly satisfactory when there is no large local broadcasting station in the city in which the receiver is being operated. If there is, the addition of a good wave trap will eliminate practically all of the interference. For distance work the untuned primary method is O.K. and is plenty selective enough. As many as 25 and 30 stations have been "logged" in one night on a receiver of this type with no interference.

TOO MUCH POLITENESS.

How hard it is sometimes to find out what people really want? In the effort to be polite we sometimes deprive ourselves of pleasure and at the same time fail to give it.

This is the kind of thing I mean: Four of us were playing bridge. A fourth woman came into the room and was immediately implored to take a hand, each one offering to give up her place.

The conversation ran something like this:

A Familiar Conversation.
First woman: "My dear, I wish you'd take my hand. I really would rather knit."
New Arrival: "But I really don't."
Second woman: "Oh no, don't take hers, take mine. I really ought to go upstairs and write a letter."
New Arrival: "I'm only going to stop a minute, I really—"
Third woman: "I've been having horrible hands. You'd better take mine if you aren't afraid of my luck."
New Arrival: "Oh no, I couldn't possibly."
Fourth woman: Rising and forcibly pressing new arrival into her place: "Now you just sit down here. I'm awfully tired and I know I ought not to play any more."
New Arrival: weakly: "Well, if you really don't want to play I'll play a little while but I really ought to. Do I make these cards? Aren't they pretty ones?"
And at last the game went on. Everyone had been polite and the conventions had been satisfied. But afterward I discovered two facts.

Oil on the Waters

Recent cases of pollution of the sea by oil, supposed to be "waste" from oilburning vessels, have aroused widespread interest. A very little oil, it may be added, can cause "pollution." A spoonful of olive oil thrown on the Serpentine

covered a tract of water over twenty yards in diameter! On the same basis it has been estimated that a cubic tank, each side of which was sixty-four yards, would suffice to cover the Atlantic with a film of oil.

An interesting theory regarding oil pollution has been advanced by Lord Beatty, one of the greatest living authorities on petroleum. He ascribes

the pollution to the breaking-up of ships containing oil in their double bottoms, of which many were sunk during the war.

These ships were sunk by bombs, and the oil in their double bottoms remained untouched. Time, however, causes corrosion, and this permits the liquid fuel to exude.

In Memoriam

HERBERT PENNEY, North Arm, Holyrood.

The hearts of the people of North Arm were saddened to hear of the early death of young Herbert Penney, a bright pupil of the North Arm School, much liked by his teachers. (Miss Flynn firstly, and Miss Moore recently), he was fond of school and books, and had little difficulty in passing the Preliminary Exam, C.I.E., 1925. Young Herbert was not in regular attendance at school the past year, for his father was one of the architects engaged at the Quebec big bridge construction work, and the boy was kept at home to help fill his place. Sometime after Christmas he was attacked by a strange and insidious disease. Father Finn was called to the sick boy to administer to him the rites of Holy Church, and was constant in attention to comfort him in his sufferings. Dr. Giovanetti was called, but the disease had made such ravages on the boy's system unable to respond to the treatment he was pronounced incurable. He died on March 10th, and the news of his untimely death came as a shock to his brother members of the Star of the Sea Association, who at the annual meeting less than two months ago had elected him a member of the Amusement Committee. At 8 o'clock on the morning of March 12th, the members of the Association were convened at his home preparatory to attending his funeral in processional order, and to pay the last tribute of respect to his remains. Under the leadership of the Rev. Fr. Finn, P.P., and a very large congregation assisted at the ceremonies. Those being ended the procession moved to the cemetery, where the remains were interred in the first and only grave of the family plot.

Last St. Patrick's Day, Herbert enrolled himself a junior member of the Star of the Sea Association; but alas, the Association, this St. Patrick's Day, performed the sad duty of passing a vote of sympathy to the bereaved parents and voted the Death Benefit of \$40.00. He will be missed from the Association, as a young and active member of the Amusement Committee. But how much more will he be missed from the home circle, where his loving parents were so often gladdened by his gleeful presence. We can well estimate their feelings on the loss of their cherished one, but they have the consoling thought that he fought bravely to push death aside, his death was holy and edifying. To his sorrowing parents we offer our sympathy, R.I.P.

Stamina

As Wonderful As Its Flashing Speed

The ideal motor car must have the qualities of both the sprinter and the long-distance runner to the highest degree and it is one of the sources of its ever-increasing popularity that this is true of the Chrysler Six.

Like the winner of the 100-yard dash, the Chrysler Six is quick on the get-away and develops flashing speed almost instantly. These qualities have been a source of wonder and delight ever since the car was first introduced.

Yet the Chrysler, unlike the usual short-distance champion, also possesses the stamina and dogged endurance of the long-distance marv.

If there ever had been any doubt of this it was dispelled once and for all when the Chrysler Six recently covered 1000 continuous miles in 13 hours, 6 minutes, 16 1/2 seconds elapsed time, for an average speed of 76.32 miles an hour.

Yes, the Chrysler Six is built for speed, it is built for hair-trigger action, it is built for comfort, it is built to conserve space, weight and size, it is built for economy—but above all it is built of highest quality to endure and to deliver, whatever the demands may be.
