B. GREENING & Co.

Hamilton, Canada.

BURNELL'S

FOUR-POINTED GALVANIZED STEEL BARE WIRE FENCING

There are now before the public a number of pointed bars, which to the casual observer, bear a close resemblance to the Burnell bars which we are selling. A close examination of them will show the difference and inferiority.

The Grand Trunk Railway Company of Canada give preference over all other, and have contracted with us for one hundred tons of fencing for immediate delivery.

We claim superiority for our Bare Wire over all other for the following reasons:

1st - It is the only best quality of Galvanized Steel Wire.

2nd - It is two strands of No. 12 Wire are twisted together just enough to allow for the contraction of the iron of the metal caused by heat and cold, and not so as to figure the structure of the steel.

3rd - The Bars on our Wire are four-pointed, always presenting a barb laterally or at a right angle, in a great quantity over the two-lath wire, as it is unable to get against the fence to break it or to get it out.

4th - The Bars are fastened to the wire at every 7 inches, in a manner entirely different from any other, and are securely locked around and between both wires, so that they cannot slip or move toward each other, and thereby prevent the untwisting of the cables should either wire get loose.

5th - The machinery by which the Bars are put on the wire, is so perfect that the Cable Wire are not injured or weakened in the process, as is the case with other four-pointed wires.

Manufactured by the CANADA WIRE COMPANY, Montreal.

H. R. IVES & Co., Montreal.

THE TUPPER GRATE BAR.

Thoroughly tested and approved. One set will do several of any other kind, and save a large percentage fuel. For steamboats, stationary boilers, etc.
