"The general resemblance of milk modified by the Peptogenic Milk Powder to the infant's natural supply, is a very striking one."

R. H. CHITTENDEN.

"The object to be accomplished in the preparation of cows' milk is to make it resemble human milk as much as possible in chemical composition and physical properties.

"When properly prepared, the resultant, so-called 'humanised milk,' (prepared with Peptogenic Powder), presents the albuminoids in a minutely coagulable and digestible form; has an alkaline reaction; contains the proper proportion of salts, milk sugar, and fat; is not bitter in taste, being but partially peptonised, and in appearance as well as chemical composition resembles human milk."

LOUIS STARR.
