

SANMETTO IN ENLARGED PROSTATE, WITH SUPPRESSION OF URINE AND CHRONIC INFLAMMATION OF BLADDER.

I have used Sanmetto in enlargement of the prostate suppression of urine and chronic inflammation of the bladder, and can recommend its use for any and all of the troubles of the urinary tract.

SANMETTO IN PROSTATITIS, URETHRITIS, CYSTITIS.

I have used Sanmetto extensively in my practice for some years, and in well chosen cases have always gotten good results. I look upon it as a most valuable remedy in prostatitis, urethritis, cystitis, and, in fact, all inflammatory conditions of the genito-urinary tract.

W. J. CHITTOCK, M.D.

Jackson, Mich.

SANMETTO IN URINARY IRRITABILITY IN THE AGED OF BOTH SEXES, IN ENURESIS IN CHILDREN, AND IN SEXUAL ATONY, ESPECIALLY THE SEXUAL AVERSION AMONG WOMEN WITH MAMMARY NON-DEVELOPMENT.

I have used Sanmetto extensively in my practice, and am now prescribing it two or three times daily, and have to meet with the first disappointment in well chosen cases. I use it with feelings of assurance in urinary irritability in the aged of both sexes; in enuresis in children; and in sexual atony, especially the sexual aversion among women with mammary non-development or mammary atrophy, because of nursing. Its action seems to be very remarkable upon the glands of the genito-urinary tract. Many cases of immature organs rapidly develop under its use, and the atonic condition of abused organs relieved. I like Sanmetto and shall continue its use where indicated.

JOHN D. NORTH, M.D.

Jackson, Mich.

NOTICE.

The attention of our readers is called to the advertisement of the Lacto-Globulin Co., of Montreal, who are placing on the market a new proteid food which appears to be a decided improvement on the foods now before the Profession. This food contains 83 per cent. of proteid matter and 4.76 per cent. of phosphates of calcium, sodium, potassium, etc., which it is claimed are converted by the process into glycerophosphates. The principal scientific achievement claimed by the manufacturers is that the process preserves in concentrated form the natural digestive blood-enzymes of fresh milk. The process was discovered by two medical men in Montreal, who have been devoting the last ten years to this subject, and the preparation is being placed in the hands of the profession solely, as an adjuvant food in all cases of malnutrition, indigestion, wasting diseases, etc. Its value has already been practically demonstrated in a series of clinical tests, and the food will fill a long-felt want if it fulfils the claims made for it.

The manufacturers will offer every opportunity to medical men to test this food by sending samples as required.
