OCTOBER.—A practical farmer, on the subject of sowing grass seeds, says he has always raised better crops, that is, got a better stand by sowing his grass-seed early in March, upon land in winter wheat or rye, rolling it and plastering it well. He has tried sowing timothy in the fall in land that had borne a crop of winter grains, harvested early, ploughed and harrowed, and the timothy brushed in. In this way an excellent crop of timothy grass has been obtained, paying for any loss that might be sustained from not sowing again with grain, either in the fall or spring. Much, however, depends on the character of the season. If the land is to be kept for meadow, he would never sow timothy with clover. If anything is sown with clover he would prefer orchard grass, because it is fit about the same time.

No stock of medicines complete without Jacobs' Rheumatic Liquid.
The formula for Dr. Colby's Pills is invaluable.
