Ladies should beware of using Lead, Bismuth or Arsenical preparations either as an application or as a medicine. The after effects of taking these poisons for any extended period are terrible and simply mean the forming of a habit as dangerous as that of opium and which cannot be discontinued without great will power, and the after effects will show in blotches and sores (which are almost incurable) not only on the face, neck and arms, but over the body generally. *A word to the wise is sufficient.*
