

SULLIVAN "DR6" HAMMER DRILLS

Sullivan "DR6" Drill drifting in hard iron ore at Iron Mountain, Michigan.

REPAIR ECONOMY

At a big Cripple Creek Mine, that has used similar drills for years, the "DR6" was given a long trial. When the results were compared, the monthly repairs per drill ran thus:

Competitor "A"	\$20.66
Competitor "B"	29.19
Sullivan "DR6"	8.62

As the work done by the "DR6" was also considerably more than that done by the other drills, the management has standardized on "DR6's."

DRILLING SPEED

A British Columbia Mine recently cancelled an order for 12 "—" drills, because it proved to itself, by fair and complete tests, that the "DR6" could drill just 66 per cent. faster in the same rock. Now it is buying "DR6's."

Why not try the "DR6" yourself?
