Swedish civil engineer and scientific aeronaut, will start next year on a balloon journey to the North Pole, under the auspices of the Royal Swedish Academy of Science and with the finan-Academy of Science and cial support of a number of Swedish Chimerical as such an undertaking

seems to be, its projectors believe it will be a success, with most important In a lecture before the Royal Swedish Academy recently Mr. Andree outlined his plans. He declared that the science of balloon construction and of steering a balloon during the last four years has a balloon during the last four years has advanced so far as almost to solve the practicability of aerial navigation.

His plan is to establish headquarters at the Norwegian Islands on the northwest coast of Spitzbergen. Here a house or shed of sufficient size to cover healest of Spitzbergen of 72 6 feet in

a balloon of 22 metres, or 72.6 feet, in diameter when filled with gas, will be erected, and from this point the balloon journey to the North Pole will com-

factured and for sale and can be transported any distance in cylinders; 1,700 to 1,800 cylinders are sufficient to fill a polar ballon such as Mr. Andree will use the can be drawn off and insulation restored.

There is no danger whatever in these there is no danger what will be the call of the call of

be of such carrying power as to sup-port a large, strongly built gondola. The gondola will contain a dark room for photographic purposes, a sleeping room for three persons, and will be provided with a system of sails for steering. The gondola will be supposed to the storm, when a motorman was flower than the case the other day during the storm, when a motorman was flower than the storm is the storm in the sto steering. The gondola will be suspended from the balloon in such a way, that in case of disaster it can be instantly detached.

An interesting feature of the projected trip is that the balloon will not rise higher over the earth on an average than 825 feet. This will be accomplish by means of drag-lines, constructed of cocoa fibre, thus permitting them to float on water. The balloon can there-

The journey, as now ranned, will be in a direct line from Spitzbergen over the North Pole to Behring Sound, a

DAVISVILLE HOTEL, WALTER H. MINNS regions are peculiarly fitted for a long proprietor, Davisville, North Toronto, Ont. aerial voyage. The lowest temperature are pushing news.

Street cars pass the door. Means on European at Spitzbergen in July, 1883, was a few the Month of the sur-

pass along evenly and without obstruc-tion. Still another advantage is the ab-sence of electrical storms; no record has ever been made of lightning or thunder in this part of the globe. It has been suggested that a heavy snow fall would destroy the balloon, and this would car.

gen expedition in 1882 '83, says that the wind currents are favorable during the attuned to welcome sweet spring once ummer months for a balloon voyage. The only danger he fears is that on reaching the North Pole, or the centre of the polar regions, a perfect calm may be found to prevail; but experience has

proved that such a centre is usually sur-rounded by wind currents blowing out-Mr. Andree has a European reputana as a scientific aerial traveller. He is not an enthusiast, but a practical coolheaded man of science, who has made nany experimental tests besides many

BY BALLOON TO THE POLE balloon journeys. In his balloon Svea-last November he travelled from Gothenburg on the west coast of Sweden to the Island of Gotland, in the Bartic, a distance of over 245 English miles, covering the distance in five hours.

PLAYFUL ELECTRICITY.

Wet Bay.

The motorman of an electric car doesn't need to be versed in physics to get practical illustrations of the laws that govern the workings of the subtle electric fluid. Any young student could readily explain how, why and when the motorman or conductor of an electric treat car might expect to receive a street car might expect to receive a sharp reminder of the fact that he was only partially curbing a great and invisible power. The rope by means of which the con-

ductor swings the trolley from the front to the back of the car at the end of each to the back of the car at the end of each trip passes vertically down into the back of the car, where it can be handily reached. It is a well-known fact that the water which runs off the trolley wheel and down the rope is heavily charged with electricity. As it drips steadily on the floor of the car the woodwork of the latter becomes gradually saturated and a wet battery is formed, the circuit being complete from motor to trolley down the rope to the car. Standing on the wet platform the conductor tres in diameter, to be constructed of two-fold silk covers, and said that a belloon of this size and construction would float for thirty days without refilling.

As an indorsement of M. Yon's statement the sile of the sile of the statement the sile of the sile when trying to remove the coin from a vessel of electrically charged

As an indorsement of M. Yon's statement, Henri Giffard, Poisenilles and Graham, who are well-known aeronauts, computed that the balloon would lose comparatively a small amount of gas in a month.

The gas used for balloons is now manuated and for sale and can be transpared for sale and can be transpared

There is no danger whatever in these polar ballon such as Mr. Andree will use and can without any difficulty be transported to Spitzbegen. As it might be somewhat dangerous to fill a balloon in the open air, Mr. Andree will erect a portable shed to cover the balloon when being filled.

The balloon under construction will the design of the accumulated electricity and even then a slight shock can be obtained by touching different metallic portions of

the car.
The motorman may occasionally rethe storm, when a motorman was flung bodily back against the door of his car. The "controller," as the car men call the crank with which the motorman the crank with which the motorman closes the current and obtains the power from the trolley, is located close to the brake. The latter is a ground wire. If the car be charged with electricity and the motorman seize "controller" and the motorman s the motorman seize "controller" and brake simultaneously he must receive cocoa fibre, thus permitting them to float on water. The balloon can therefore be kept at the same distance from the earth in passing either over ice or water. It was in this way that the water.

> partly to bad insulation, and also, in a hypnotized until the frost is over.' a conductor affords for the collection of current at points where the flow of water is uninterrupted. On the tracks tor of London Truth, "a story about

the North Pole to Behring Sound, a distance of about 2,294 miles, and will not, it is expected, occupy more than six days, which is a fifth part of the time the balloon can float without refilling.

DUCATIONAL.

BUSINESS COLLEGE, TORONTO attord—Canada's greatest competent scientist. Photographs will be taken of the country, as the balloon floats forward, and these well be taken of floats forward, and these well be developed on board the balloon in case the travelers meet with accident and have to take to the gondola. The balloon will also be provided with Davy's safety amodation for families visiting the chester car from Union Station to is moderate. Table d'Hote & to & JOHN H. AYRE, Manager.

LE HOTEL, WALTER H. MINNS

The Kalser's Informal Call.

The Berlin paper Das Nolk claims to have received the following story from a Frenchman living in Berlin. As will be remembered, the Emperor William, on the morning the news of Casimer-Perier's resignation became known in Berlin, drove at once at an early hour to the French embassy. M. Herbette had only just got up, and when the illustrious visitor put in an appearance he had just begun to dress. The emperor, who had to be informed of this, amiably sent him word that he was not to put himself out of the way at all, but to come just as he was. He consequent is above the horizon, so that the Arctic regions are peculiarly fitted for a long with the thought of the surviving news.

at Spitzbergen in July, 1883, was a few degrees above the zero point.

Another advantage of ballooning in the Arctic regions is the absence of vegetation, and thus the drag-lines will proceed the server of the se suggested that a heavy snow fall would destroy the balloon, and this would certainly be a misfortune. But from records made in July at Spitzbergen this danger is not to be feared.

The total cost of the expedition will be about \$40,000, and this amount has already been subscribed. King Oscar of Sweden takes a great interest in the proposed balloon journey, and will no

WHEN WOMEN GROW BALD.

of the Best Ways in Which to Treat

Partial baldness among women is painfully common although they have the advantage of being able to conceal the distressing fact better than men can. Generally the baldness comes where the hair has been worn in one way for the advantage of being able to conceal the distressing fact better than men can. Generally the baldness comes where the hair has been worn in one way for many years, the straining of the roots and the use of many hairpins, as well as the overheating of the scalp because of the mass of hair piled upon it, being said I must try B.B.B., because it is the best medicine ever made, and I took three bottles of it, with the result that ing baldness of this kind is to vary the style of hair dressing so that the coils will come on another part of the head, and to do up the hair as loosely as possiblo. A massage treatment will often bring good results.

The mode of treatment is to stimulate and strengthen the tone of the nerve of the head and to the result that it has completely cured me. I think Burtier of the head and to down the head and to down the head and strengthen the past three years, and was not free the past doctors. The deceased came to St. Louis 40 there of the deceased came to St. Louis 40 there is a single day. I used doctors. The deceased came t

siblo. A massage treatment will often bring good results.

The mode of treatment is to stimulate and strengthen the tone of the nerve endings by massage of the whole body, but especially of the head and scalp. Scrupulously avoid all strongly alkaline soaps in washing the head, but rub in a little olive oil two or three times each week, then wash with oatmeal water, and finally with soft warm water. Lastly, and most important, see that plenty of nerve nutrition is supplied in the food, which should include fresh green vegetables and salads, plenty of ripe, sweet fruit, and for drinks, chocolate, and some good preparation of wheat, rice or barley, which are rich in the phosphates in a very assimilated form.

It to all my friends.

During bis absence in England of Lieut. Colonel W. D. Otter, Deputy Adjutant Gentle Colonel W. D. Otter, Deputy A peace the while." She was followed by the prime minister, leading the chief's pig, to whom succeeded the chief's wife, clad in a divided skirt of kuki cloth and wearing the royal amber necklace.

The chief himself came next. He wore a red helmet, two flannel shirts, an evening dress coat and waistcoat— the latter being arranged outside the the latter

coat-and a garment of Lushai cloth. costume. Last of all came a "gentle-man in waiting," who carried the royal bedding in a bundle.—London Times.

Possibilities of Hypnotism. Henry Labouchere suggests some fore be kept at the same distance from the earth in passing either over ice or water.

The balloon will also be provided with a great number of free hanging ballast lines. The object of these is that in case the balloon from some cause or other suddenly sinks to a great depth

A passenger may get a faint shock in wet weather the moment he steps on the car.

It often happens in stormy weather that there are a series of flashes to be seen wherever wires cross. This is due partly to had insulation, and also, in a great day.

The Diplomatic Dufferin.

water is uninterrupted. On the tracks under the wheels a similar phenomenon may often be observed, even in dry weather. The dirt raises the car off the rails, and the contact being thus destroyed the current leaps across the intervening space and there is a minute out of his way to explain to our ambastic that this way to explain to our ambastic that the result of the stronger of the contact the result of the rails. MAP SHOWING COURSE OF BALLOON.

as soon as the ballast lines touches the ground the balloon will be relieved of a corresponding weight and the sinking will stop before the gondola touches the ground.

tervening space and there is a minute scintillation of steel.

In foggy weather the thin coating of water on the outside of the car will sometimes carry the current. Dry, warm weather favors good insulation, and so none of these phenomena are the demonstration was against Burent in the demonstration of the car will sometimes carry the current. Dry, was against Burent in the demonstration was against Burent in the demonstration of the car will sometimes carry the current. Dry, was against Burent in the demonstration of the car will sometimes carry the current in the cur the demonstration was against Burgun-dians. The Frenchman had to concur dians. The Frenchman had to concur in this. 'I shall be happy to take part myself in the procession,' said Lord Dufferin. The Frenchman smiled in a sickly way. 'Nay, more,' continued Lord Dufferin, 'there is a gentleman at my embassy who is a lineal descendant of the Lord Talbot of that day. He, too, will be delighted to join.' The too, will be delighted to join.' The smile became more sickly. 'In the ancestral halls of the head of his family there is probably the armor of the Lord Talbot of the days of Joan of Arc; his descendant would wear it.' The Frenchman changed the subject of the conversation.

Among the many interesting facts to be gathered from Mr. Savage-Landor's ble frame of mind.—Chicago Record. book on Corea, lately published, by no means the least striking is the author's statement that the native queen "is much in favor of the emancipation of he Corean women."
But unfortunately the sympathy of

her Corean majesty does not seem at present to have done much toward improving the lot of her feminine subjects; for we are told that work of every kind is done by the work of every kind. is done by the women alone, who are practically the slaves of their hus-

lt would seem, after all that the Corean queen's leaning toward general feminine "emancipation" is nothing more than what theologians call a "pious opinion," for Mr. Savage-Landor says "there are tongues in Seoul who says that the queen actually rules the say that the queen actually rules the king, and therefore, through him, the

The Dead of Yesterday.

John W. Cary, general counsel of the Chicago, Milwaukee and St. Paul Railway Company, since 1859, at Chicago.

A cablegram from Cairo, at Chicago.

A rather good story about the Duke of Westminster is now going the rounds. This enormous wealthy peer never did take a great deal of interest in the cut of his garments, and it was never a matter of much concern to him whether he wore a thread-bare and glossy coat or a brand-new one. Consequently, it was not surprising that a lynx-eyed po-liceman who had been detailed to duty in the grounds of Mr. Gladstone's coun-try seat, Hawarden, at the time of the threatened dynamite plots, should have pounced upon a shabbily dressed individual whom he caught wandering apparently aimlessly about the grounds.

along with me, will you," chuckled the policeman, hustling his captive off to the house, "and tell that tale up you-The Grand Old Man happened to pass by, and, catching sight of the duke, ordered his immediate release, when the crestfallen policeman, who was too
