HOW TO FEED FARM POULTRY FOR PROFITS

Egg Production Depends Largely Upon Proper Methods of Feeding, and Upon Egg Production, Especially Winter Egg Production, Depends the Profits-Anyone Can Follow This Practical Advice.

(By A. G. Taylor, B. S. A., Macdonald College, Quebec.)

One of the leading principles in oultry keeping is successful feeding or egg production. The number of eggs laid by a farm flock decides, to very great extent, whether the flock is a source of profit or loss to its

To obtain the best results from sucessful feeding the flock must be composed of well matured birds. These ofrds should be strong, healthy and vigorous when put in the laying pen in the fall of the year. Any birds that contract colds or other allments should be removed from the flocks This is essential to prevent disease from spreading.

Experiments have shown that birds lay more eggs during their pullet year Mrs. R. S. MacKay is visiting at than any other time during their perfod of usefulness. The farmer should Mrs. Harry Edwards was the guest see that the large majority of his flock for daughter, Mrs. Arthur Potter, is composed of pullets. To be exact, Miss Pearl MacLeod spent Sunday the flock of one hundred hens should t Annapolis Royal, the guest of her consist of seventy-five pullets and twenty-five yearlings. improved and refined-is the

great heat producing food, and very appetizing. It has great fat producing qualities and should be fed with udgment. As the weather becomes warm in spring the amount of corn in the laying ration should be gradually decreased. Wheat is undoubtedly one of our leading poultry feeds. While good, sound wheat is preferable to any other grade, good results can be obtained by feeding shrunken or frozen wheat, providing the grain is not too badly damaged. It is often more economical to feed slightly damaged wheat than wheat of good milling jualities. Oats make a good poultry food when they are of good quality and contain a low percentage of hull Poor oats should never be used for poultry feeding. Oats may be fee either whole or crushed with good results. Buckwheat makes one of the best poultry feeds we have, but being a string nutritive feed must be fed with considerable judgment. It is high in flesh and and fat producing qualities and can be fed to good advantage in late autumn and winter. Buckwheat should never be fed in spring or summer, and at no time hould it constitute more than one
