AND MANY OTHERS.

These plows are constructed entirely of steel, no wood being used except in the cab. It is the only plow made with a platform enabling a man to walk entirely around the outside of the cab. The motor is hung in an independent cradle inside the cab. This cradle is so constructed that the sprocket chains, which connect the motor to the axles, can be adjusted on the road while running, thus avoiding the breaking of connection and the hot boxes so common with wooden plows.

Two men can operate the plow, all manipulation of the snow sheets being within the reach of one man, and the other man operating the motors.
