PROFITABLE INVESTMENT

THERE is no better field for profitable investment in the world today than in British Columbia timber. This is not subject to fluctuation in the sense that other commodities are, in that it is a necessity the supply of which is rapidly decreasing. Capitalists are fully alive to the situation and are quietly increasing their holdings. The great trouble is that ordinarily only men of great wealth can take advantage of the situation. The opportunity, however, is extended to all by the National Timber Company, by which the man of small means can reap the benefit of the vast increase in value of standing timber in like proportion to the man of wealth. This Company is acquiring upwards of 400 million feet of timber in the vicinity of Prince Rupert, and, being situated on the water, the expense of logging and transport is reduced to a minimum. Owing to the heavy rainfall in this locality there is no risk from fire. The timber costs the Company about 35c per thousand feet. Compare this with the price secured for stumpage elsewhere. Stumpage even in the States of Washington and Oregon runs as high as from \$3 to \$4 per thousand feet, while recent sales in Ontario netted the Government from \$10.50 to \$13 per thousand feet. With the completion of the various transcontinental railway lines, opening up, as they will, vast regions adjacent to this province, and thereby increasing the demand for timber, and with the opening of the Panama Canal, giving access to the markets of the world, the prices now obtaining elsewhere for timber will certainly prevail in British Columbia. If you wish to make an investment that is sure, and that will make you a handsome profit, place your order today. A number of shares are now offered at par value of \$1 per share. Prospectuses and full particulars mailed on application. Write or call at the office of the Company.
