Secured **Highest Award**

Canada's Success in the Forestry Exhibit at the Paris Exposition.

British Columbia by Far the Largest Contributor--Prospects of European Trade.

Angus K. Stuart, the British Columbia representative at the Paris Exposition, writes as follows:

It may, perhaps, to the average inhabitant of British Columbia, or other parts. of Canada, be considered a matter of secondary importance (merely a two-line "item" in the "latest dispatches"), that Canada, in direct and open competition with all other countries, has carried off the highest award given for February exhibits at the Paris exposition, but to any one, who, not only has seen the various international exhibits, but who also looks into the question seriously, the real significance of this fact will offer a very wide field for thought and study. Almost all other countries exhibiting in this class were awarded-or rather will he a warded gold medals, and various awards to private exhibitors will be made public later on, but Canada has secured the one and only grand prix-the highest possible award.

The average Canadian, no matter

where he hails from, no matter what part of Canada he lives in, is intensely patriotic. He delights to believe in Canada and to think that Canada is, at least in natural resources, the greatest country on earth. There are times, however, when one's faith wavers and when in spite of natural patriotic feeling doubt creeps in and one is tempted into the belief that his ideas are Utopian. It is the more gratifying therefore to be convinced by facts that in one particular, at any rate, such is not the case. Canada has had many gratifying surprises within the past six or seven years, and the exceptional "growth" in the Dominion of all market really lies. The second obstacle industries, principally owing to the disin the extreme western portion of the any kind of material at any time when country, has perhaps led Canadians generally to discount the fact that in one ing to discount the future for the purpose of our very oldest ones we still have of competing against a strong but weakthe nucleus of trade which by careful de- ening rivalry from the Baltic countries velopment of the natural resources from firms which will thoroughly study Eurocommunities of the world. I allude, of pean trade. course, to our lumber and kindred in-

come to the front here. The facts, for tural reserves.

The Canadian exhibit of forestry products is not in the main Canadian building near the Trocadero, but on the other side of the Seine in a special building devoted to international exhibits of the products of lumber and fishing industries of the world. It is one of the largest and most attractive buildings in this empire exhibition, and before going any further I may say that if Canada had spent as much on its exhibit as other competing countries it would not only have taken the first prize, but placed every other country completely in the

The Canadian exhibit itself is a collective one, made by the Dominion government, that is, by the Canadian commission to the World's Fair, under the chairmanship of Hon. Sidney Fisher, Minister of Agriculture. When the commission was appointed the various provinces and the principal manufacturers of lumber and wood products throughout the Dominion were asked to contribute. Practically speaking, the only provinces which co-operated officially in a hearty and practical way were British Columbia, Manitoba and Quebec. As regards the manufacturers, though few contributed directly, their excuse would no magnificent one covering at least eight doubt be that they were running their manufactories at full capacity and did It is very attractively arranged and no not realize the importance of making special exhibits. Therefore, with few ex- the general public. It is only (as before ceptions, all exhibits not officially sent stated) the actual commercial excellence from British Columbia, Manitoba and the and the extreme variety displayed in the province of Quebec were collected by the | Canadian section which have entitled the Ontario, on the other hand, is almost the | ion of the international jury. only one from which private exhibits

British Columbia is by far the largest practiced by continental nations. contributor to the Canadian exhibit, and without in any way wishing to discriminate, I can safely say that but for the particularly business-like and hearty printed formula are to be obtained exmanner in which the matter was taken up by Mr. Fred. Hume, it is practically Australia, especially, have abundant incertain that Canada would not have been able to cut the figure it has done here. Other and older provinces might perhaps take a note of this. The practical hard work of making this collection fell to Mr. C. J. Skinner, chief inspector for British Columbia, and the cost of this exhibit was defrayed by the British Columbia government as far as Ottawa.

Manitoba in comparison with other provinces, is not generally considered to be a timber country, and no doubt the on the part of Dr. Dawson, director of view is correct, but surprising though it may seem, Manitoba has contributed largely to the success of Canada at Paris. The principal credit of this is due panied by over one hundred photographs to W. E. Scott, of the Canadian commission, who organized the collection, and to H. McKellar, of the department of agriculture of Manitoba, who carried out all the requests sent from Ottawa,

The Crown lands department of Quebec has contributed a small but very interesting collection of the various species of wood, natural to the province. In addition to this the department of agriculture sent an exceptionally well selected exhibit of woods and pulpwood. The feet in circumference, cut from a tree at all druggists.

wood canot be overestimated.

sented officially, but indirectly. Ontario ameter. s well represented in manufactured aricles, and Nova Scotia, New Brunswick

Doubtless one of the principal reasons lence, notwithstanding that exceptional difficulty had to be encountered in collecting and transporting it, is the fact that the forestry section was to all practical purposes left to one man to arrange and manage. The actual work of collecting was done between August. 1899, and February of this year, and the entire exhibit was in place on May 7th, practically at the opening of the exhibition. The expert to whom this work was entrusted, J. M. Macoun, assistant naturalist of the department of geological survey, son of Professor Macoun, of Ottawa, who should be well known on the British Columbia coast, he having been Canadian commissioner on the Behring sea arbitration in 1895, 1896 and 1897. Descriptive of the exhibit a very useful pamphlet entitled "The Forest Wealth of Canada" is being circulated here, both in French and English. To those wishing to make a study of the exhibit this work is invaluable. It is to be hoped that it will be circulated extensively in Canada as well as in Europe,

The principal reason why the Canadian forestry exhibit obtained the highest reward is that it exceeded all others in the variety of wood exhibited suitable for industrial purposes. I am credibly informed that at present Canada is only known in Europe as an exporter of spruce pulp, Douglas fir and white pine, and that if it were known that corniferous, woods generally and oak, maple, becch, birch, elm and ash could also be exported in deals and as lumber, the result would be a most extraordinary mar-

ket for these products. Apropos of this possible extension of trade I am informed that at present two way ties and 12 pieces of lumber. principal obstacles stand in its way. The first is the lack of direct steamship communication between Canada and southern Europe. From what I can gather direct service to Mediterranean ports would be of equal, if not greater, value than a line of steamers running to Bordeaux, as going more direct to where the is the apparent inability of Canadian required. We appear to need firms will-

study of the conditions pravailing.

Thirdly, special efforts should be made in the future throughout Canada to lessen the destruction of this great nationa! asset by fire, and the re-forestry of denuded districts should be undertaken in a practical way by the various provincial governments, and by the Dominion government in the territory under its control. This work could well be carried on under a system similar to that of the forestry departments organized in nearly very country in Europe and in British

Fourthly, that the demand for wood pulp will be the basis of a very solid industry all over Canada; an international market being absolutely assured. From studying the information to be gathered here, it appears that every province in Canada is capable of taking part in this industry of the future.

With the exception of Russia, the Baltic countries (the principal rival for future European trade) have poor exhibits, hardly what any one would have expected to see. On the other hand Russia has a times as much space as that of Canada. doubt might be considered the finest by Dominion government. The province of latter to the highest award in the opin-

> Notes on the Canadian Exhibit. The Canadian exhibit contains among other special attractions a collection of eighty-six photographs of different varieties of Canadian trees. Each of these is framed in its own wood and is accompanied by a small polished specimen of wood of the same variety. This collection is the result of many years' work the geological survey of Canada, and Professor Macoun, chief naturalist. It is very tastefully arranged and accomdescriptive of the lumber industry in all its stages in every province of the Dominion:

Another prominent exhibit is a collection of forty-eight six-foot deals of the principal Canadian wood. One-third of each deal is polished, one-third waxed and one-third simply planed.

Other exhibits which speciall attract the passing throng are: A section of Dougas fir from British Columbia, 25 standing absolutely cured. 40 doses, 10c.,

"Model"

Interesting Letter Received by Mrs. Davis From Her Son in Glasgow.

Quarters in a Great City.

The following is a very interesting excerpt of a letter received by Mrs. A. Davis, of 63 Mears street, from her son, now residing in Glasgow, Scotland:

"I have been working in two of Glasred maple, black cherry, white ash, black gow's 'models' or 'Doss houses,' as they ash, white elm, red elm, rock elm, syca- are called, for about six weeks, fitting up patent sanitary arrangements for the good of the 'Dosser,' although I don't think anything is good for a 'Dosser' but strong spirits. At least that is their own white pine, western white pine, red pine, opinion, and certainly they should know, jack pine, black pine, black spruce, engli- There are three 'Doss' houses on Watson street, where I reside, the one next door being for women. The one I work in is the largest. It has six or seven hundred beds and I tell you on a Saturday or a Monday it is one of the hottest spots on earth; for on these days the 'dosser' dons his war paint and you see him in all his glory offering up blasphemy, and at times using liberally the whiskey for which he would sell his soul.

"I thought I knew something of slum life, but this place has been an eye-opener. In the Doss houses they pay from 31/2 to 6d. for a bed, and they have to do all their washing and cooking. Plenty of water is provided, as well as cooking utensils; and last, but not least, a 'hot plate' where all the cooking is done. The 'hot plate' is something like a counter in a grocers' shop, only the sides are brick and the top is covered with iron plates. There is a furnace at each end (it is about thirty feet long, four by seven broad) for heating the plates. When thirty or forty lodgers are concocting various savory messes the smell is overbearing. worked a week above the hot plate, repairing pipes, and may the saints forbid that I shall ever encounter another experience like it. They were cooking pefore I was there in the morning; they ooked all day long and were busier when was leaving at night, and ye gods what feeds they cooked. Over there you saw a man with five big tattered-looking herring in a pan. He had two chunks of a loaf like a bit of deck plant which e was toasting. When the herring were done to his mind, he filled the pan with onions, while he toasted till the blue reek fairly made my eyes water, and placing the whole delectable feed on a plate he

went away to enjoy himself. "Another had one pound of as good ham as you would wish for, and six eggs which he demolished with the greatest relish. I've seen a 'dosser' with three boards, elm and basswood veneers and stood a travelling man. He was boiling The Wm.
