From the nearness of the outcrop to the surface, and the seams lying on high and descending ground, securing easy drainage, it is considered that these seams may be most economically worked.

The freight of a ton from the head of Bay Fundy to Boston or New York is about 75 cents less than from Pictou or Sydney—of itself a good profit, while the difference to St. John is fully \$1 00.

The Spring Hill coal is well adapted for house, steam and smelting purposes. Situthes Spring Hill coal is well adapted for house, steam and smelting purposes. If Pictou and Sydney coal can be shipped to Boston and New York at paying prices. it cannot fail to be highly remunerative to send a better article from Spring Hill, with an advantage of 75 cents in freight. The local traffic would yield a high rate of profit.

Taking the low average of only 80 cents per ton, inclusive of repairs of machinery, &c., and assuming only 100 000 tons as the annual production at first, we have a gain of 20 per cent. on the capital, which might be much augmented by the rent of other of 20 per cent. From the exceptionally high character of this coal, and the seams, as suggested. From the exceptionally high character of this coal, and the facilities for raising it cheaply, this quantity, it is confidently believed, might cre long facilities for raising it cheaply, this quantity, it is confidently believed, might cre long be doubled or trebled, and a large rate of profit secured even with considerable increase of capital.

TESTIMONIALS.

Extracts from Reports of Messrs. Woodhouse and Jeffcock. Mining Engineers, London and Derby, G. B., (January 2, 1866)

The Coal Field which we have carefully examined, and which is the subject of this Report, is situate in the county of Cumberland, in the province of Nova Scotis. It is generally described as the "Springhill" Coal Field, but in re-lity it is a part of the great Cumberland Coal Field.

The first or upper seam we found to be a bed of remarkably good coal presenting a very
