

STYRA-PHENOL

A New Non-Secret Antiseptic Dressing

R. Balsam Peruferum	-	6	Drachms
Balsam Tolutanum	-	5	"
Benzoin	- - -	$\frac{1}{2}$	"
Styrax	- - -	1	Scruple
Olibanum	- - -	1	"
Colophony	- - -	9	Ounces
Phenol	- - -	3	"

The formula here given you for **Styra-Phenol** is a rational departure from the usual composition of ointments, and seems to possess certain desirable properties to which I would particularly invite your investigation :

- 1st. It is absolutely free from oil or grease in any form.
- 2nd. It destroys pathogenic germs, retains its proportions unaltered, losing nothing of its germicidal qualities, and remains in contact (usually until new epithelial growth takes place), ensures against entrance of fresh germs after wound is dressed ; and so does away with the frequent dressings now deemed essential.
- 3rd. It has immediate anodynous effect, when applied to burns, inflamed ulcers, suppurating sores or wounds ; and by aiding in the repair of any injury, it reduces inflammation rapidly.
- 4th. Recognizing the value of Anti-Microbial-dry-dressings over others, **Styra-Phenol** is practically a dry dressing, and remains as such.
- 5th. It has none of the hazards of strong solutions, or ointments, and can be used with absolute safety under all conditions.
- 6th. When moderately heated over a spirit lamp, its vapors, when mingled with air and inhaled, combine both antiseptic and sedative treatment for the lungs and air passages, and exert a most beneficial effect on the mucous membrane.
- 7th. Its styptic properties prevent blood clot intervening between the dressing and tissue.

This compound can be had from **Messrs. Evans & Sons, Wholesale Chemists, Montreal**, under above name, or it may be prescribed in usual manner as per formula.

Arrangements are being made to supply English and United States Chemists with the preparation
