THE MINING REVIEW

An Important Find Has Been Made in the Mascot.

-The 100,000 Ton Mark Passed.

The shoot is from six to seven feet in The shoot is from six to seven feet in ments are now being made, assays from width and assays of a carefully made \$12 to \$33. The Evening Star shipped sample shows that it runs \$264.61 to the three carloads of ore to the smelter last A remarkable feature of the find week. is the fact that the ore carries over 200 such a large percentage of silver has yet is larger than the ordinary. The shoot carries considerable arsenical iron and the gold values are especially associated with this. There is considerable quartz in the vein matter, but the ore is ordinary looking and no one would suspect that it carries such high values. The samples assayed were taken from the face of the tunnel. The ore body has been drifted on for a distance of about 12 feet and there is good reason for the presumption that the ledge at the depth found will be of the ledge at the depth round with 56 of equal richness and like permanency for the full length of the property. This will be determined as speedily as possible by drifting. It certainly looks as though this find in the Mascot is as important a one as has been made in the camp for the past year. This is so because it is in a portion of the north belt, where it was claimed by some critics that there were no valuable ore bodies. The company operat ing this property and the manager, Mr. W. Y. Williams, have from the first believed in the Mascot and it must be gratifying to them to find that their opinion

The Ore Shipments. Onee of the most gratifying features of the week, from a mining standpoint, has been the increase in the ore production, which has not only turned the 100,000-ton mark for 1899, but has also broken the record for weekly shipments. And this notwithstanding that a large shipper, the Centre Star, owing to the installation of a new power plant, did not ship a pound of ore during the week. The Iron Mask is increasing its shipments, and averages eight cars a week, while the Evening Star is holding its own, and the big shippers, the Le Roi and War Eagle, are steadily increasing their output. The Columbia-Kootenay has made its first shipment for the year, having sent a carload of ore to the Hall Mines smelter at Nelson. Fol-

has been located, which carries two feet in condition for development and or of clean ore and the rest of mixed ore. It goes \$264.61 to the ton. Mr. W. will again help to swell the record of ore Y. Williams, the superintendent of the shipments.

In or able to fix the date of the first shipment.

Royal George.—Sinking on the ledge is still in progress and results continue fastill in progress and results continue fastill in progress. property from the first, has had faith white Bear.—The vertical shaft is now in it, and it has been on his recommendation of 325 feet, and the man distance of 325 feet, and the man distance of 325 feet. From Mr. Williams was learned the par ticulars of the find yesterday The drift west from crosscut No 3 from tunnel No. 2 was extended 10 feet during the week, ably be commenced within two weeks. and is now in for a distance of 70 feet. The face of the drift is nearly all in ore of a grade. Tunnel No. 3 was extended along the vein. The most satisfactory results were obtained from the ore encountered in the tunnel, as will be seen from the following assay of a general sample taken from the face of the tunnel: Silver,

Mr. Williams says he was astonished at the values and in order that there might be no mistake, he had a check assay of be no mistake, he had a check assay of the same ore made by the same assayer with practically the same result. There is about two feet of clean are and four or five feet of mixed ore. It was stated about three weeks ago that the same Forteath. A crosscut is being run from about three weeks ago that the same ledge had been encountered, but that was in the crosscut: "I regard the strike as one of great importance," said Mr. Williams. "Such high values in silver have never before been found in the ores of the north belt, and this indicates that something out of the ordinary has been found. The tunnel in which the ore is found if extended towards the west end of the claim, will give a vertical depth of between 700 and 800 feet on the vein. The point where the find was made is 500 feet in from the portal of the tunnel. The course of the wein on which the find has been of the vein on which the find has been of the vein on which the find has been of the vein on which the find has been of the vein on which the find has been of the vein on which the find has been on the Portal of the tunnel. The course of the wein on which the find has been on the Portal of the vein on which the find has been on the Portal of the tunnel at work, under the superntendence of contents. A crosscut is being run from the tunnel, at a point near the foot of the shaft, on the 40-foot level, and it is expected that the ledge will be reached in the course of a week or two. Progress made.

pers, will in a short time be verified.

The ore shoot is now known to have a horizontal length of 170 feet and a depth THE ORE IS OF A HIGH GRADE of over 200 feet, and has been opened from the 200-foot level to the surface by an upraise and below this for a distance an upraise and below this for a distance of about 25 feet by an inclined shaft.

There is a cross ledge on the property, which is aloud 20 feet in width, which way of Ore Shipments Have Been Broken carries ore on the surface that runs from \$9 to \$12 per ton. The management has decided to develop this, as the low freight rate which has been accorded it by the The most important happening of the Northport smelter makes it possible to mine ore of this grade at a profit. The week among the mines of the camp is the other and smaller ore body, which is now that is from six to seven feet in

Virginia.-Two shifts are at work in ounces in silver. This is something out of the ordinary as no ore that carried been located 200 feet south of the main shaft. The new shaft has been timbered been met in the north belt. Then the specific that it carried over six ounces of gold ing made, the ore still staying with the to ship a carload of the ore to the Trail smelter. This ore will be sent down on Monday or Tuesday, and the result of the smelter test will be awaited with interest, as showing the value of the shoot, which is looked upon as the best in the mine. In the meantime rapid progres, is being made on the crosscut which is being run to tap the ore body at a depth of 300

Sunset No. 2.-Crosscuts to the north and south are being continued on the 100foot level in the new shaft, which has been sunk at the intersection of veins No. 2 and 3. On the ledge recently discovered on the Gold Hunter, one of the group, a tunnel was run in on the foot wall a distance of 40 feet, a crosscut being run a distance of 17 feet across the ledge at that point. The crosscut is all in ledge matter which gives indications of value. Before doing any further development work on this ledge, however, considerable surface prospecting will be done, as a main shaft will have to be sunk to explore the vein at depth. Twenty-three men are working on the property.

main drift has been extended about 95 feet, and the two long crosscuts to the south have been extended about 80 feet Altogether nearly 200 feet of work has been done in the last three weeks. Every part of the mine is looking remarkably well. If progress can be kept up at the same rate for the next fortnight. the crosscuts and drifts should have reached their objective point in that time.

Gertrude.-Mindful of the many recent instances where good ore has been found on the surface of veins, after useless sinkinstances where good ore has been round.

To nother surface of veins, after useless sinking on other portions of the leads, the management of the Gertrude is keeping a small force of men at work stripping the surface of the ledge. At the same time development in the underground workings of the property is being pushed forward, the 200-foot level being the scene of the mine during the week owing to the changes that are being made in the power plant. The new boiler is now on the ground, and within a very short time the inground, and within a very short time the production, and the Centre Star returns out able to fix the date of the first ship in condition for development and or in condition for development
