## NARCISSUS IN WINTER

THEY WILL GIVE CHOICE BLOOM  
IN THAT SEASON.

Procure the Bulbs by October—Rich Loamy Soil Is Needed—Bury Boxes in the Cellar—Feeding Bees for Winter—Spray or Dust Potatoes? (Contributed by Ontario Department of Agriculture, Toronto.)

The narcissus varieties may be potted for winter bloom as soon as the bulbs are obtained in September or early October. If it is desired that the bulbs be grown in the home window, it is advisable to use either a six or eight inch flower pot, setting from five to ten bulbs, according to the size of the stock.

### Good Deep Boxes for Cut Flowers.

If it is desired to grow the bulb bloom in quantity and use the cut flowers in vases, then plant the bulbs in boxes of any shape and not less than three inches in depth. A box twenty-four inches by twelve inches by three inches is very handy. The soil should be a rich garden loam to which add one-third of the bulk of leaf mould and sufficient sand to keep the soil from clinging. Suitable drainage, provided by means of coarse clinders, or broken pottery, should first be placed in the bottom of the pots or boxes and then the prepared soil in quantity sufficient to reach within one-half inch from top of the box or pot after the bulbs should be pressed in and covered. Sprinkle just the tip showing.

### Bury the Boxes in the Cellar.

When all the boxes or pots are prepared such should be buried if possible in solid frame or in the basement, watered well, and then covered with five inches of sand or screened material. This covering will insure the necessary cool condition and prevent drying out. Such treatment will develop a good vigorous root system, a condition which must precede the bloom. Eight weeks beneath the sand is usually sufficient. A pot may be examined then and if found to be full of roots it can be moved to the light and heat.

### Some of the Best Varieties.

From four to six weeks of forcing are required to bring narcissus of the following listed varieties into flower: Von Sion, Glory of Lieden, Sir Watkin, Trumpet Major, Emperor, Empress, Golden Spur, Olympia, Sulphur Phoenix, Bl-color, Victoria, Barri Conspicua, Madame Flemp, Alba Stella, Cynosure, Poeticus ornatus, Poeticus grandiflora and the Polyanthus and Poetas types of all varieties.—L. Stevenson, Dept. of Extension, O. A. College, Guelph.

### FEEDING BEES FOR WINTER.

See That They Are First Carefully Fed With Well Prepared Syrup—Carefully Replace Packing for Winter Stand.

At all times during summer and early autumn care should be taken to see that colonies do not starve. So long as they have enough for daily food winter feeding should be delayed until the first half of October. Each hive should then be given all the syrup it will take. This may be anywhere from 10 pounds to 40 or 50 pounds, depending on the strength of the colony and the amount of stores it already has. The syrup is made of two parts best granulated sugar to one of water. Boil the water, then add the sugar and stir till thoroughly dissolved. The only points to be observed are to avoid scorching the sugar and to see that no granules are left in the syrup to start crystallization after it has been stored in the comb.

When feeding time comes in the early part of October, the packing is removed from over the feeder-board and a number of filled pails or jars are inverted over the holes. If the days are warm this is done towards evening to prevent robbing, and if the nights are cool packing is put around the feeders to hold the brood-chamber heat and help the bees take down the feed. As fast as feeders are emptied they should be refilled, until the bees signify that they have enough by ceasing all work on the feeders. The latter are then removed, the burials, paper and packing are replaced, and the roof is adjusted for the winter. The feeding may take a week or more in cool weather, but should be gotten through with as rapidly as possible after it is once started.

### To Spray or to Dust Potatoes?

The high efficiency of liquid Bordeaux mixture for the control of insect and fungus enemies of potato foliage has been demonstrated in tests so often as to make its use general with potato-growers. Dusting has been used considerably, but carefully conducted tests over a period of four years show that the practice is not so efficient as the liquid form of application. Where water is difficult to obtain, and in small fields where it is necessary to use hand apparatus, dusting is advisable. For areas larger than one acre and with water and a power sprayer available, the spray is better.
