

32. In most of our countries progress in constructing new nuclear facilities is slow. We intend in each of our countries to encourage greater public acceptance of nuclear energy, and respond to public concerns about safety, health, nuclear waste management and non-proliferation. We will further our efforts in the development of advanced technologies, particularly in spent fuel management.

33. We will take steps to realize the potential for the economic production, trade and use of coal and will do everything in our power to ensure that its increased use does not damage the environment.

34. We also intend to see to it that we develop to the fullest possible extent sources of renewable energy such as solar, geothermal and biomass energy. We will work for practical achievements at the forthcoming United Nations Conference on New and Renewable Sources of Energy.

35. We look forward to improved understanding and cooperation with the oil exporting countries in the interests of the world economy.
