

- Other strains of microorganisms were obtained by Iraqi researchers, but there have been no research results published on them. These include the bacterium *Francisella tularensis*, which causes tularemia; and the West Nile virus.
- The American Type Culture Collection and the U.S. Centers for Disease Control are reported to have shipped materials to researchers in Iraq.
- No publications at all were found from Salman Pak, although it was said by Iraqi officials to be conducting research on food contamination.
