NOTE.—The tide table in the calendar pages may be rendered applicable to various other places on the coast by simply adding or subtracting, as the case may be, the difference between the times of high water on the full and change of the Moon at St. John's, and the time of the full tide at any other harbor; for example, to find the time of high water at any of the principal harbors of Conception Bay, add 45 minutes to the time at which it will be high water at St. John's; for Piacentia Bay add 2 hours; for St. Pierre, 1h, 50m; for Ferolle, on the North-West Coast, 4 hours, &c.—[See table L VII of *Norie's Epitome*.]
