

DOMINION AND PROVINCIAL MAPS

Let us study for a little while the Map of the Dominion of Canada. (See large colored map.)

We must first learn how to determine directions on a map. Do you notice the fine lines which cross the map both up and down and from left to right,—those up and down being closer together at the top of the map than at the bottom, the others curved and the same distance apart for their whole length? Examine your school globe and see if you can find similar lines on it. Those drawn up and down run directly toward the north and south poles, and therefore show the directions north and south. The curved ones go east toward the right and west toward the
