Governour Lawrence died in 1760, and Governour Ellis, who had been Governour of Georgia, was appointed Governour, and near left Europe; but Mr. Belcher, fenior counfellor, was appointed Lieutenant Governour, and was fucceeded by Colonel Wilmot in 1763, who was appointed Lieutenant Governour, and was afterwards, in 1764, ap-

pointed Governour in the place of Mr. Ellis.

In 1766, Governour Wilmot died, and the administration of government was successively carried on by Mr. Green, the senior counsellor, and Lieutenant Governour Franklin, until the end of the same year, when Lord William Campbell, who had been appointed Governour, arrived. He continued in the government until he was succeeded by Colonel Legge in 1773, who was called home in 1776. The administration of government was afterwards successively in Lieutenant Governour Arbuthnot; in 1778, in Sir Richard Hughes; and in 1781, in Sir Andrew Hammond.

In 1782, Colonel John Parr was appointed Governour, in the flead of Governour Legge. He died in November, 1791, Æt. 66. On his death, Richard Bulkely, President of the Council, was sworn into the administration of government. John Wentworth, Surveyor General of the woods, was then in England; and as soon as Governour Parr's death was known there, he applied for the commission and obtained it. He arrived in the spring of 1792 at Halisax, and was received by the

inhabitants with great fatisfaction.

N. B. It is to be observed, that fince the British provinces in North America have been put under a general Governour, the Governour of each province is styled Lieutenant Governour. The general government comprehends Nova Scotia, New Brunswick, St. John's, Lower Canada, and Upper Canada. The relidence of the general Governour is at Quebec.

A Short Description of the ATHERINE, two specimens of which have been lately presented to the Cabinet of the Hystorical Society.

THIS little fish is called by Linnæus Atherina (Menidia) pinna ani radüs viginti quatuor, or Atherine with twenty-four rays in the fin behind the anus. It is four inches in length, is semitransparent, and has a broad silver line extended from the opening of the gills to the insertion of the tail. The tail is forked. The iris of the eye silvery. The back is marked in diamonds by dotted lines.

It is found in great abundance in the river Piscataqua, in the months of August and September. It feeds on minute aquatick insects of the monoculus kind, and is preyed upon by several fishes as well as shell

drakes.
