

REPUBLIC STOCK ADVANCES.

A Second Great Ore Belt Proven to Exist in Rossland Camp—It is Four Miles Long.

NEWS RE CROW'S NEST COAL CO.

Lake of the Woods and Rainy River Mines—The Mining Exchange.

The accompanying cut presents the well-known features of Mr. William C. Fox, a member of the Executive Committee of the Toronto Mining Exchange. Mr. Fox is the senior member of the prominent local mining brokerage firm of Fox & Ross. He was one of the first to call attention to such Ontario properties as the Fox and Golden Star, and has also operated successfully in British Columbia.

Republie Camp, like the mine of that name, is developing new features peculiar to itself and hitherto wholly unknown to the mining world. For instance, most of the ore is absolutely free from base metal, yet it cannot be treated by any known free milling process. In fact, the combination process which is now in vogue is not only capable of saving about 85 per cent of the gold, but it also saves the usual charges for mining, freight, treatment, etc. While this loss is not of vital importance in low grade ores, when it comes to treating ore running from 10 to 200, as is the case in the Republic, it is a loss of one-fifth, irrespective of the usual charges for mining, freight, treatment, etc. This loss is not of vital importance in low grade ores, when it comes to treating ore running from 10 to 200, as is the case in the Republic, it is a loss of one-fifth, irrespective of the usual charges for mining, freight, treatment, etc.

Another Rossland Ore Belt.

The ascertained extent of Rossland's ore-producing area is gradually increasing. The tremendous possibilities of the great north belt of Rossland were proven when similar bodies of valuable ore were found in the Le Roi, War Eagle and Crow's Nest at one end of the big zone, and in the Columbia and Kootenay mine, eight or nine miles off at the other extreme, and now it would seem that a second belt of no less importance has been proven some miles to the west of Rossland.

A short time ago a vein of ore 45 feet in width was opened up on the Velvet mine and more recently a vein of high-grade ore has been uncovered on the Wallingford group. The Wallingford and Velvet mines are four miles apart, but it is estimated by mining experts that they are upon the same mineral zone. This Velvet-Wallingford belt, therefore, is very extensive one. The Victory-Triumph lies in the same neighborhood as the Velvet, and the Wallingford, and the other properties which have shown some promise lie in the same zone, in fact between the Victory-Triumph and the Wallingford.

Crow's Nest Coal to the Front.

According to the last issue of The Fernie (B.C.) Free Press, the Crow's Nest Coal Company's properties, the vastness of the Crow's Nest coal field has been made known to the public. The construction of the 150 extra coke ovens contracted for some time ago is under way. When these are constructed the coke-producing capacity of the company will be vastly increased.

The Crow's Nest Coal Company is already playing an important part in the smelting industry of British Columbia. Both the Trail and Hall mines smelters have recently started up with coal supplied from Fernie, the Crow's Nest Company having already delivered to each plant over 4000 tons of coke.

This company is also reaching out to the American market, and is endeavoring to secure the patronage of the smelters in the Northwestern States. The first shipment of coal was made to Butte, Montana, and if the question of transportation can be satisfactorily solved the Crow's Nest Company may find a large market, as the daily consumption in this smelting capital of the west is at least 500 tons of coal. There is no doubt that the enterprise of the company, combined with the splendid quality of their product, will ultimately capture this market.

The Bullock Machinery Company of Chicago has just delivered at Fernie a large ventilating fan to be used for the ventilation of mine No. 2. It has a capacity of 100,000 cubic feet a minute and will be operated by a 50 horse-power engine.

The Rathmullen Company, at the second annual meeting of the Rathmullen Consolidated Mining and Development Company, held in Rossland recently, very satisfactory reports were received of progress of development work were received. The results of the assays read were received with great satisfaction. As depth is attained the ore bodies are getting wider and showing higher values, and when transportation arrives (expected by June of this year) the Rathmullen will be in a position to ship with profit.

It is the intention to carefully prospect the entire property this year, besides continuing to sink upon the Crow's Nest claim. Recent assays from this claim show: Gold, a trace; silver, 55 ounces copper, 9.5 per cent.; say \$33.40 an all values.

Measures J. B. Henderson, Grand Forks, and C. S. Wallis of Rossland, were elected directors to replace W. C. McDougall and C. L. Haywood of Rossland, and A. Strobel of Dundee, Scotland, compose the board.

The Ontario Gold Fields Company.

Editor World: Some of the shareholders in the Ontario Gold Fields Company are readers of The World, and would like you to advise them as to what this company is doing. (Signed), Inquirer.

Woodbridge, April 25.

The affairs of the above company are apparently not in a very satisfactory condition. The company owns the Monarch group of three claims in Colorado. Upon these properties \$2000 has been spent. The work has been abandoned, owing to lack of funds to prosecute the same. The company has no other asset except in the shape of a party of explorers in the Klondike. These men went up there under contract to the company a year ago, but a year of which time has already expired. The party has located a number of claims, but none of them has been staked yet. The secretary of the company, however, recently received word that work is being prosecuted on the claim No. 24, on Bonanza Creek. At the time the report just referred to was written the miners had got down to the level and had succeeded in getting a dollar to the pan. Water, however, was interfering with the work. The contract under which this gang of men is working lasts for six months yet, it is possible that the company may reap something from the expedition.—Ed.

Princess and Black Sturgeon.

The following speaks for itself: Thomas Shortland, Esq., Toronto: Dear Sir:—On Saturday I was down to the Black Sturgeon mine, I and the Black

Sturgeon is looking well, and they are making good progress. Their shaft is down 150 feet and a drift has been extended 45 feet on the course of the vein east from the shaft. They do not know how wide their vein is, but both shaft and drift are 10 feet or more in width; their last sample gave \$30 per ton of 2000 lbs. How is this? The run of the vein is ten degrees N. of E., so runs square into the Princess location. They intend to start another drift at 150 feet to cross-cut through the vein. They do not intend putting in a mill until they have reached the depth of 400 feet. Things here are lively, and look well for the future. Quite a number of properties are changing hands and starting work. (Signed) Z. J. S. Williams, M.E. Bat Portage, April 24, 1899.

Old Thunder Bay Mine. An old mine in the vicinity of Port Arthur, Ont., is to be reopened, and tenders are now being asked to pump the water out of it. The property in question is the Thunder Bay Silver mine. It is many years since the company abandoned the work, because of its abandonment being the wiping out of all the mine buildings by forest fire. The property was first discovered by Peter McKellar on Sept. 20, 1866. It lies two and one-half miles northeast of Port Arthur, and is about five miles from Port Arthur, which was then called "The Landing." It is a large tract of land, and is now owned by the Government. The mine was suspended in 1860.

ABOUT REPUBLIC CAMP.

World's Correspondent Describes a Number of the Leading Properties Out There.

Spokane, Wash., April 25.—(Special Correspondence.)—Van B. DeLamont of this city, one of the pioneer mining operators of the Pacific Northwest, has recently returned from an extended trip to Republic Camp, visiting not only the mine but the surrounding country, and has returned with a number of interesting facts. Mr. DeLamont is an enthusiastic as ever over the promise outlook for the camp, and in an interesting way told the correspondent of The World what was being done. He said:

"Republic Camp, like the mine of that name, is developing new features peculiar to itself and hitherto wholly unknown to the mining world. For instance, most of the ore is absolutely free from base metal, yet it cannot be treated by any known free milling process. In fact, the combination process which is now in vogue is not only capable of saving about 85 per cent of the gold, but it also saves the usual charges for mining, freight, treatment, etc. While this loss is not of vital importance in low grade ores, when it comes to treating ore running from 10 to 200, as is the case in the Republic, it is a loss of one-fifth, irrespective of the usual charges for mining, freight, treatment, etc. This loss is not of vital importance in low grade ores, when it comes to treating ore running from 10 to 200, as is the case in the Republic, it is a loss of one-fifth, irrespective of the usual charges for mining, freight, treatment, etc."

Another Rossland Ore Belt.

The ascertained extent of Rossland's ore-producing area is gradually increasing. BUY IN THE ST. GEORGE

An opportunity to double your Capital only \$150,000. Shares \$100 each.

Figure on a valuable stock like this? If the capital was \$2,000,000, as the general rule, and see how little your stock costs you, even at 25c, on this capital, 20,000 of this allotment has already been taken in Toronto, Montreal and other places. Only 10,000 more for sale at this price; next issue, 50c. This company has been fortunate enough to secure the Pleasures of Hope Mining Property, lying between the Mother Lode and Tammany Groups, Burnt Basin, Kettle River District, B. C., which property one of the directors, Mr. T. G. Egle, is now River District, B. C., dated April 8, recommends to the company that no more stock be sold under 50c, and that Rossland experts state at our samples of copper and declare them wonderful.

The Tammany Group has recently been sold (see Toronto World of April 15), and it is understood the Mother Lode is bonded for \$60,000. The company has also been fortunate enough to secure a bond on a rich copper claim adjoining the famous McGowan Mine, in the District of Parry Sound, and reported on as carrying the same vein as the famous McGowan, and is said to be one of the richest copper claims in Canada. The McGowan Mine has recently been sold to a St. Paul and Minneapolis company for \$100,000, and it is expected that the claim of this company will bring that price before the end of this year. This company will push development work on a large scale, and the sale of any one of the properties will have the effect of sending this stock many times par.

Send me orders at once for a portion of this balance of 10,000 shares, while it lasts. Prospects and all information on application. Also write or wire me for quotations on Golden Star, J. O. 41, Alice A., Harry Coon and all other standard stocks.
