

# **Genuine Gas Coke.**

## **What it is.**

A granular porous by-product of coal gas manufacture, composed of almost pure gray carbon, which possesses the highest heating value.

It is sold in two sizes, large or "factory" size, suitable for all factory purposes or large surface burning furnaces, small or "domestic" size, adapted to hot air or hot water furnaces, stoves, grates and all base-burning or magazine stoves.

## **Qualities and Characteristics.**

Ignites quickly. Burns freely under full draft. Burns slowly and steadily under checked draft. It is very tenacious in combustion and holds fire a long time, usually until wholly consumed.

Being free from smoke or soot, it gives the cleanest service, great heat, and the highest efficiency of any available fuel.
