

Delirium from drink is dangerous ; *Resolvent* is a certain cure.

A VIEW OF THE URINARY ORGANS.

No. 1.—The Kidneys. No. 2.—The Ureters. No. 3.—The Bladder. No. 4.—The Rectum. No. 5.—The Abdominal Aorta. No. 6.—The Renal Capsules.

Reported to Radway & Co. an Interesting Case.

I hope you will bear with me while I relate another remarkable case of the virtue of your *Resolvent*, which was brought to my knowledge in this way, viz., when in Hamburg, Iowa, which was 12th of June last, I replenished my stock of the remedies at that point by taking on three cases of your *Resolvent* to put it in my wagon. There was quite a little crowd around seeing me at work. A gent in the crowd says : "That is a very good thing you have got there." I asked him if he had ever used any of it. He said yes, he had used it, and knew quite well what it had done for him. He then stated that he had been afflicted with what the doctors called *Urinary or Renal Calculus* or gravel in the kidney ; that he had tried various doctors, that they all failed to give him any relief, and that he had also tried various medicines without any benefit, and that he was at last induced to try your *Resolvent*. He said, "I was taking my third bottle of it when now about three weeks ago this came from me." Putting his hand into his vest pocket, he opened up a paper producing a something which was horrible to look at. I asked him if he meant to say that that *thing* had passed from his bladder. He said yes, and that he was a well man that day ; that he had continued on and took about two bottles afterwards. The *Gravel Stone* he said he was going to take home to show his doctors. He gave me his signature, and said if Dr. Radway wanted to make use of his name he could do so. His name is R. A. Shaw, Columbus, Ohio, advance agent for Forepaugh's Show and Menagerie.

Yours truly,
J. GILLISPY.

MARYVILLE, MARSHALL CO., KANSAS, August 15, 1877.

Mr. Shaw had passed a mulberry calculus. In its track from the kidney to the bladder it occasioned great pain, passing through the ureter. See cut.

R. & Co.

He that intends to live long and healthy must not vomit often.

Consumption is most fatal between the ages of 20 and 40.

Acute maladies determine themselves within fourteen days.
