Percheron Offering of C. D. Roberts and Sons

Elsewhere in this issue C. D. Roberts and Sons announce their winter offering of quality Percheron stallions. It consists of 40 registered stallions of both their own breeding and importations. In breeding and also in selecting for importation, this firm has always kept in mind the importance of flat, flinty bone, with good deep feet. Their present offering is of the large flashy type for which the firm has the reputation of handling. They are dark greys and blacks, weighing from 1,900 to 2,200 pounds. The ages range from two to five years. We are sure that the farmers of Western Canada will appreciate them.

In the lot are many which have been prominent prize winners both in the United States and Canada. The four-year-old stallion, "Innus," was first at the 1918 Brandon Winter Fair. He with "Jules," a three-year-old in the collection were first at the 1917 International in the class for the best two animals the produce of one dam. The dam of these young stallions is the mare "Crickette," herself a one-time International Champion. These two stallions were also in a group which won a prize for the group of five stallions owned by one exhibitor, at the same show. A number of other stallions in the offering have equally as good records.

The two-year-olds are mostly home-bred and sired by the famous stallion, "Kolombin," 5185. They are out or richly-bred matrons which may be seen at the stock farm.

The firm is quoting very reasonable prices on the lot of stallions, as they wish to make room for the young stallions that are coming on. Every horse that leaves the farm is strictly guaranteed. Those in need of a stallion would do well to get prices and descriptions of these horses. Liberal terms are given to responsible parties. Address: C. D. Roberts and Sons, 254 Belvidere Street, St. James, Winnipeg, Man.

Seed Grain Purchases

The Seed Grain Purchasing Commission would advise municipalities, farmers' organizations and individual farmers to procure, if possible, their supplies of Seed Grain locally, or through the ordinary channels of trade. Failing this, to notify the Commissioner as early as possible of their needs, so that a sufficient quantity can be accumulated, cleaned and distributed in time for seeding.

The Seed Wheat supply is already secured and in store in the Canadian Government Elevator at Calgary, Moose Jaw and Saskatoon. To avoid congestion of distribution from these elevators in the spring, the Commission would suggest that orders for Seed Wheat be placed with the Commission at as early a date as possible, so that the wheat can be distributed before undertaking to supply Oats, Barley, etc. There is always the danger of mixing when all of these grains are being cleaned and distributed at the same time, also the danger of break-downs, thereby causing delay in cleaning and handling, together with the possibility of an early spring, bad roads and ice, breaking up on the rivers, causing delay in delivering in good time Seed Wheat from railway destination to the farmers.—Advertisement.

Inspection and Testing of Seed Oat Samples

The Government Seed Purchasing Commission is anxious to obtain all surplus oats in good oat districts that will clean up and make suitable seed to supply the demands for seed from districts that had a partial or complete crop failure last season.

Farmers, elevator companies and others having oats which they can spare to meet this demand, for which the Seed Purchasing Commission pays premiums on either one or two seed and Commercial Grades "A" and "B," are recommended to send samples to the Dominion Seed Laboratory at Winnipeg from Manitoba or Saskatchewan, if in Alberta to the Dominion Seed Laboratory at Calgary, to see if their oats are suitable and will pass for seed purposes.

One pound samples should be forwarded and these should be representative of the bulk lots intended for sale. A note should be included in each sample, giving the name and address of the sender, and the quantity of seed which the sample represents and which the shipper has for sale. Where farmers have less than car lots it is recommended that this matter should be talked over with their neighbors and endeavor to make up car lots of surplus oats suitable for seed. Samples of all these lots should be forwarded and advice received, before mixing them together when shipping.

Samples will be examined and tested at the Seed Laboratory for purity of germination and a letter returned, giving, in the case of samples found suitable for seed, a Provisional Seed Certificate and instructions where to bill the cars.

Seed Inspectors working under the direction of the Inspection Division of the Seed Branch are stationed at all the cleaning plants handling the Seed Purchasing Commission's seed, including the C.P.R. Elevator at Transcona, Winnipeg, and Elevator at Edmonton, and the Government Interior Terminal Elevators at Saskatoon, Moose Jaw and Calgary. Unload samples of ears billed to these points are inspected and if the number of wild oats per pound comes within No. 1 or No. 2 seed or does not exceed 100 to the pound for Commercial Grades, and the germination is satisfactory they will be accepted, Seed Certificates issued and advice sent both to the shipper and the Seed Purchasing Commission, whose headquarters are at Regina.

There will not be any charge for Seed Inspection for any samples forwarded to the Seed Laboratory, unless they exceed 25 samples, or for inspection of cars at the elevators.

Postage should be prepaid on all samples forwarded to the Seed Laboratory. For Manitoba and Saskatchewan: 176 Portage Avenue East, Winnipeg; for Alberta: Commercial Travellers' Building, Calgary.—Advertisement.
