

# CYANIDE FROM AIR

CYANAMID WORKS, NIAGARA FALLS

In January, 1917, the first Aero Brand Cyanide was made at the above plant. Today this plant has the largest cyanide producing capacity in the world.

Thousands of tons of Aero Brand Cyanide have been used in Mexico, Canada and the United States for the reduction of gold and silver ores. The results obtained have proved that pound for pound of contained cyanide, Aero Brand is equal in efficiency to any other grade.

Aero Brand is sold at a **lower price, per pound of contained cyanide**, than any other grade.

Send for Booklet C, telling all about this interesting, money-saving product.
