

The Insley Method of Concrete Distribution

Is used on buildings with comparatively few hundred yards of concrete, and by the largest contractors on the most important work undertaken.

Combination Holst.

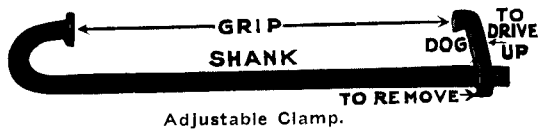

Insley Spouting System.

WHY?

Primarily, because it is more economical in ultimate costs, than any other method of placing concrete. It also insures a high grade of work. The initial set takes place in the forms, not in the transport. Freedom of tracks and runways.

Send for particulars and catalogue.

Adjustable Clamp.

Concrete Receiving Hopper.
