PANOPEPTON—Peptonised Beef and Bread in a perfectly agreeable, soluble and absorbable form is of incalculable value in the feeding of the sick.

Bread and Beef require for conversion into assimilable solution, four hours of normal digestion—must traverse the entire digestive tract and receive the action of its several distinct and converting ferments.

Bread and Beef contain a considerable portion of unassimilable substance—the food ballast ; these, as well as the products of imperfect digestion, readily decompose, into substance which, even in health, exert the most depressing influence, and in sickness become highly malefic. The greater prostration of the patient the more useless and more dangerous is ordinary food, and the more useful and beneficial is PANOPEPTON.

PANOPEPTON is instantly and wholly assimilable and sterile.
