tions; one large Laboratory, for Physiological and Pathological investigations; one smaller Laboratory; one large Museum; one Chemical Laboratory; a large Reading Room, exclusively for use of students; Laboratory; a large Reading Room, exclusively for use of students; a separate room for students' library; a students' waiting-room, together with the rooms for Faculty and Staff.

The rooms are well furnished with all that is required for the purpose of giving a thoroughly practical course in every department.

The building is open for inspection during the whole year, and the Faculty will be happy at any time to receive visits from their friends, including former students, and the public generally.

It has been found to be a great advantage, in every way, to be in such close proximity to the Toronto General Hospital. The students can avail themselves of all the Clinical advantages of that institution without any loss of time in passing between it and the school building. This hospital is the largest and best conducted in the Dominion, and frequent additions and improvements are being made from time and frequent additions and improvements are being made from time to time. The trustees have recently made an addition to the operating theatre, which gives it a seating capacity for 500 students. At the same time it is commodious, well arranged, and well lighted.

All the patients of the Hospital are placed at the disposal of the active staff for Clinical purposes, and arrangements have been made whereby the students will have the benefit of all the instructions given therein by the whole Staff of the Hospital.

The instructions given are of three kinds: 1st. Out patients' clinics, when remarks are made on the various cases appearing from day to day; 2nd. Regular clinical lectures delivered daily on patients brought from the wards to the Hospital theatre; 3rd. Bedside instructions systematically given in the medical and surgical wards to a limited number of students in each class. Students will be required to examine patients, take notes of cases, and undergo daily oral examinations. In teaching Gynæcology, two clinics are given each week, and four students in succession are taken to each clinic in the special ward for the diseases of women. There will be four clinics a week in the Eye and Ear department. A regular course of clinics will be delivered on Diseases of the Skin, to supplement the didactic lectures given in the School. Instruction will be given in the Burnside given in the School. Instruction will be given in the Burnside Lying-in Hospital from time to time, as cases of interest arise. Post-
