

Poor Roads Cost You as much as Your Help

SEVERAL thousand Minnesota farmers figured up the various losses they suffered in a year as the result of poor roads. They made the astonishing discovery that *these losses came to a total large enough to pay for all their hired help!*

The roads in this Minnesota district are not by any means the worst roads in America. They might be called good roads if compared to some that are only too well known. But they are bad enough to cause the loss of more than half a million dollars yearly to the farmers who have to use them.

Read The Story These Figures Tell

Loss because of longer routes to town.....	\$61,994 01
" " " slow progress in hauling.....	75,627 64
" " " extra trips	158,607 34
" " " specific reasons (perishable goods spoiled, good markets missed, horses ruined, etc.)	220,574 16
Loss because of inability to haul manure.....	91,925 00
Total Loss	608,728 15

The average loss to each farmer was found to be \$150.

He lost \$1.70 for every acre farmed. He lost 13 cents every time he carried a ton of produce over one mile of bad roads.

He lost one-tenth of his total crop. He paid as much for bad roads as he did for his hired help.

He paid enough to pay off his mortgage in three years and leave something over—

And all this **in addition** to his regular road tax, which was spent in the hopeless task of making a poor road good by repairing it.

Have you figured up what poor roads are costing **you?**

Try it, and in the meantime write for information about

Concrete Highways

CONCRETE has solved the good roads problem—solved it in a way that means neither high taxes nor make-shift methods. Write to-day for the booklet "Concrete Highways," and other free literature that fully explains why concrete is the best and most economical material, for country highways as well as for city streets.
